

MathWorks  
**AUTOMOTIVE  
CONFERENCE 2023**  
India

# The Transformative Journey of Software-Defined Vehicles with Model-Based Design

**Vijayalayan R**  
Moderator

**Mr. Bhupesh Tekade**  
Deputy Vice president –  
Embedded SW development,  
RNTBCI

**Mr. Hariharan Lakshminarayanan**  
Principal Software development  
manager – India and Asia Pacific,  
Stellantis

**Dr. Manaswini Rath**  
Senior Vice President and Global  
Business Head  
SDV, Autonomous Driving, Chassis,  
KPIT

**Mr. Gerd Winkler**  
Director, Engineering for Frontloading  
and Architectures  
Vitesco Technologies GmbH

- **Explosion of features** leading to **Expensive & Complex** Distributed E&E architecture
- New **Eco system** & Players
- New **Business Models**: Pay what you use
- Safety & Security Concerns

**SDV revolution mimics the smartphone industry transformation**

**Bhupesh Tekade**  
Deputy Vice president –  
Embedded SW development ,  
RNTBCI

# Software Defined Vehicle

**Hariharan Lakshminarayanan**

Principal Software development  
manager – India and Asia Pacific ,  
Stellantis

# SDV - Driving Forces

USER AND BUSINESS DEMANDS

- > Customer Experience
- > Value-add functionality
- > Additional Revenue Streams

# Motivation for Software Defined Vehicles (SDV)

## Owners of Vehicle

- ▶ Feature on Demand
- ▶ Pay as per Usage
- ▶ Continuous Upgrade
- ▶ Ease in Use
- ▶ Available on a Click

## OEMs

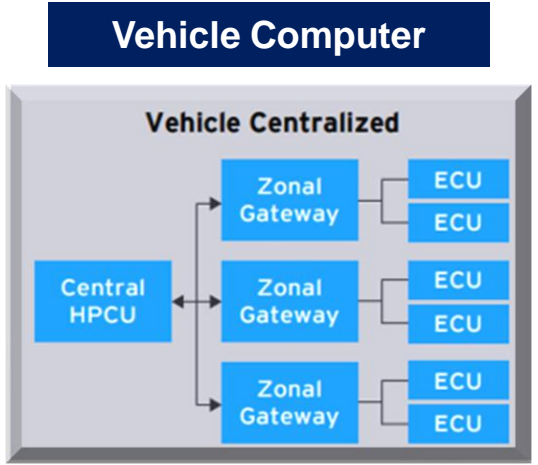

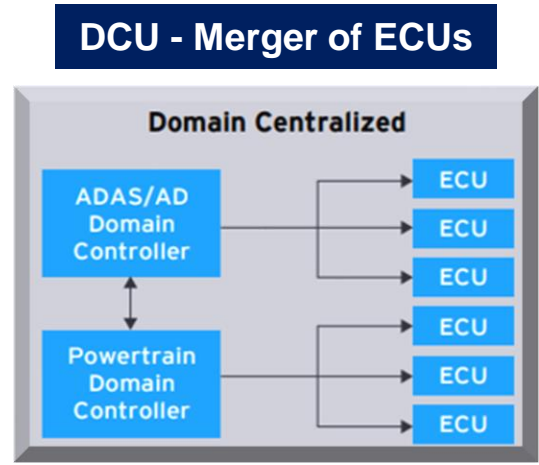

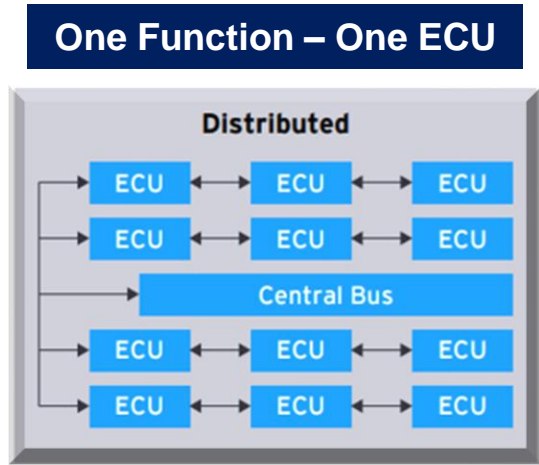

- ▶ Monetization from Features
- ▶ Revenue maximize through License model
- ▶ Software Ownership
- ▶ Reduce Cost with ECU Hardware Consolidation
- ▶ Monetization from Data

## Communities

- ▶ Usage of Platform (App based Feature)
- ▶ Users contribute to Apps
- ▶ Common Platform Approach
- ▶ Standardization
- ▶ Data Reuse

A

B

### Features on Demand

### Frequent Product / SW / Cyber Security upgrades

### Residual Value Improvement

### Customer Loyalty

**Evolution of Development Process, Methods & Tools - Safe Agile / DevOps / Virtualization**

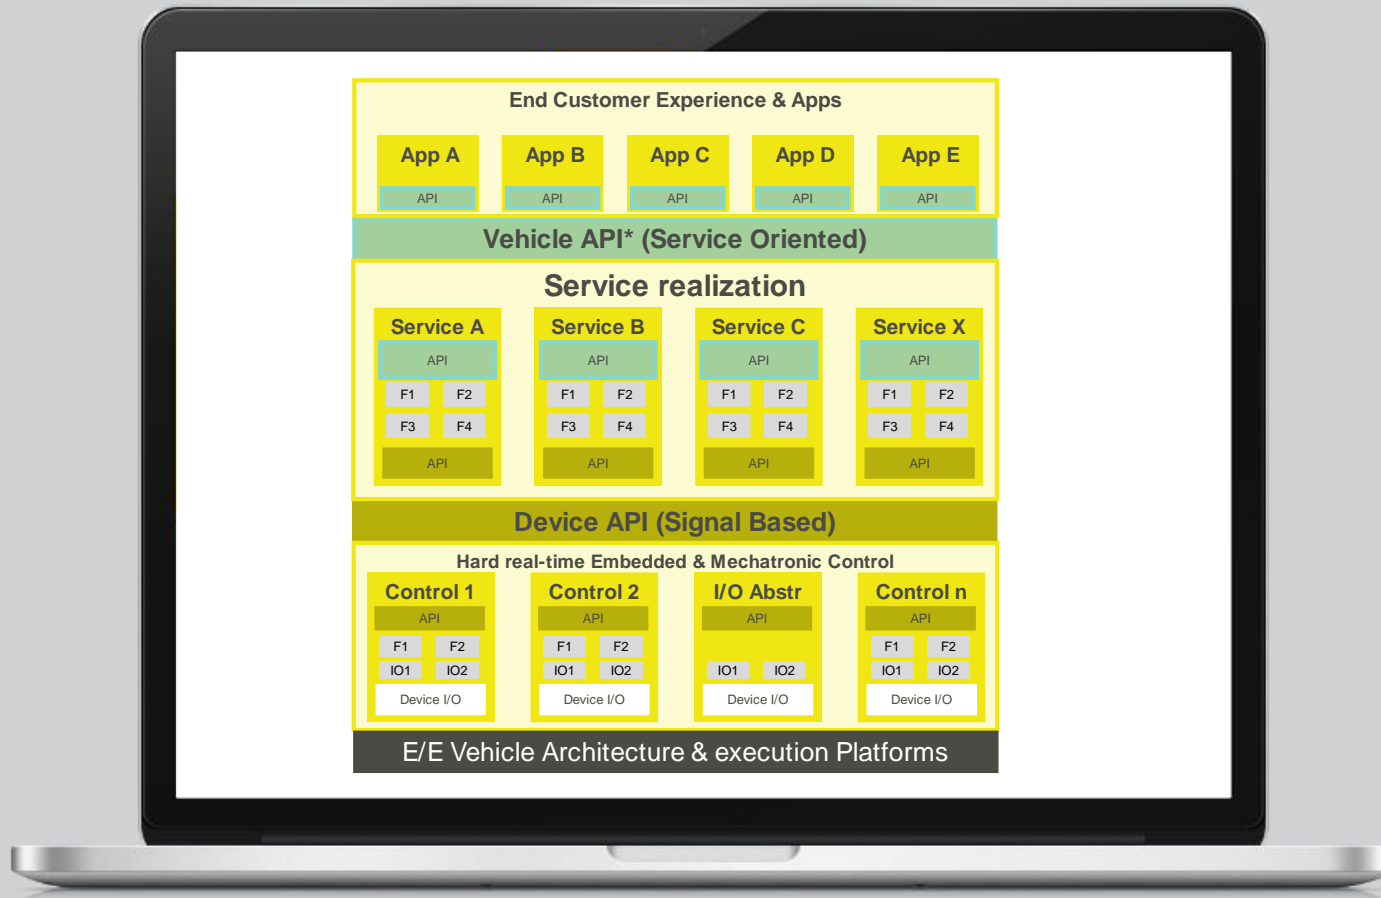

**Bhupesh Tekade**

Deputy Vice president – Embedded SW development , RNTBCI

# SDV – The Magic Middleware

CONNECTS THE APP WITH THE VEHICLE HARDWARE

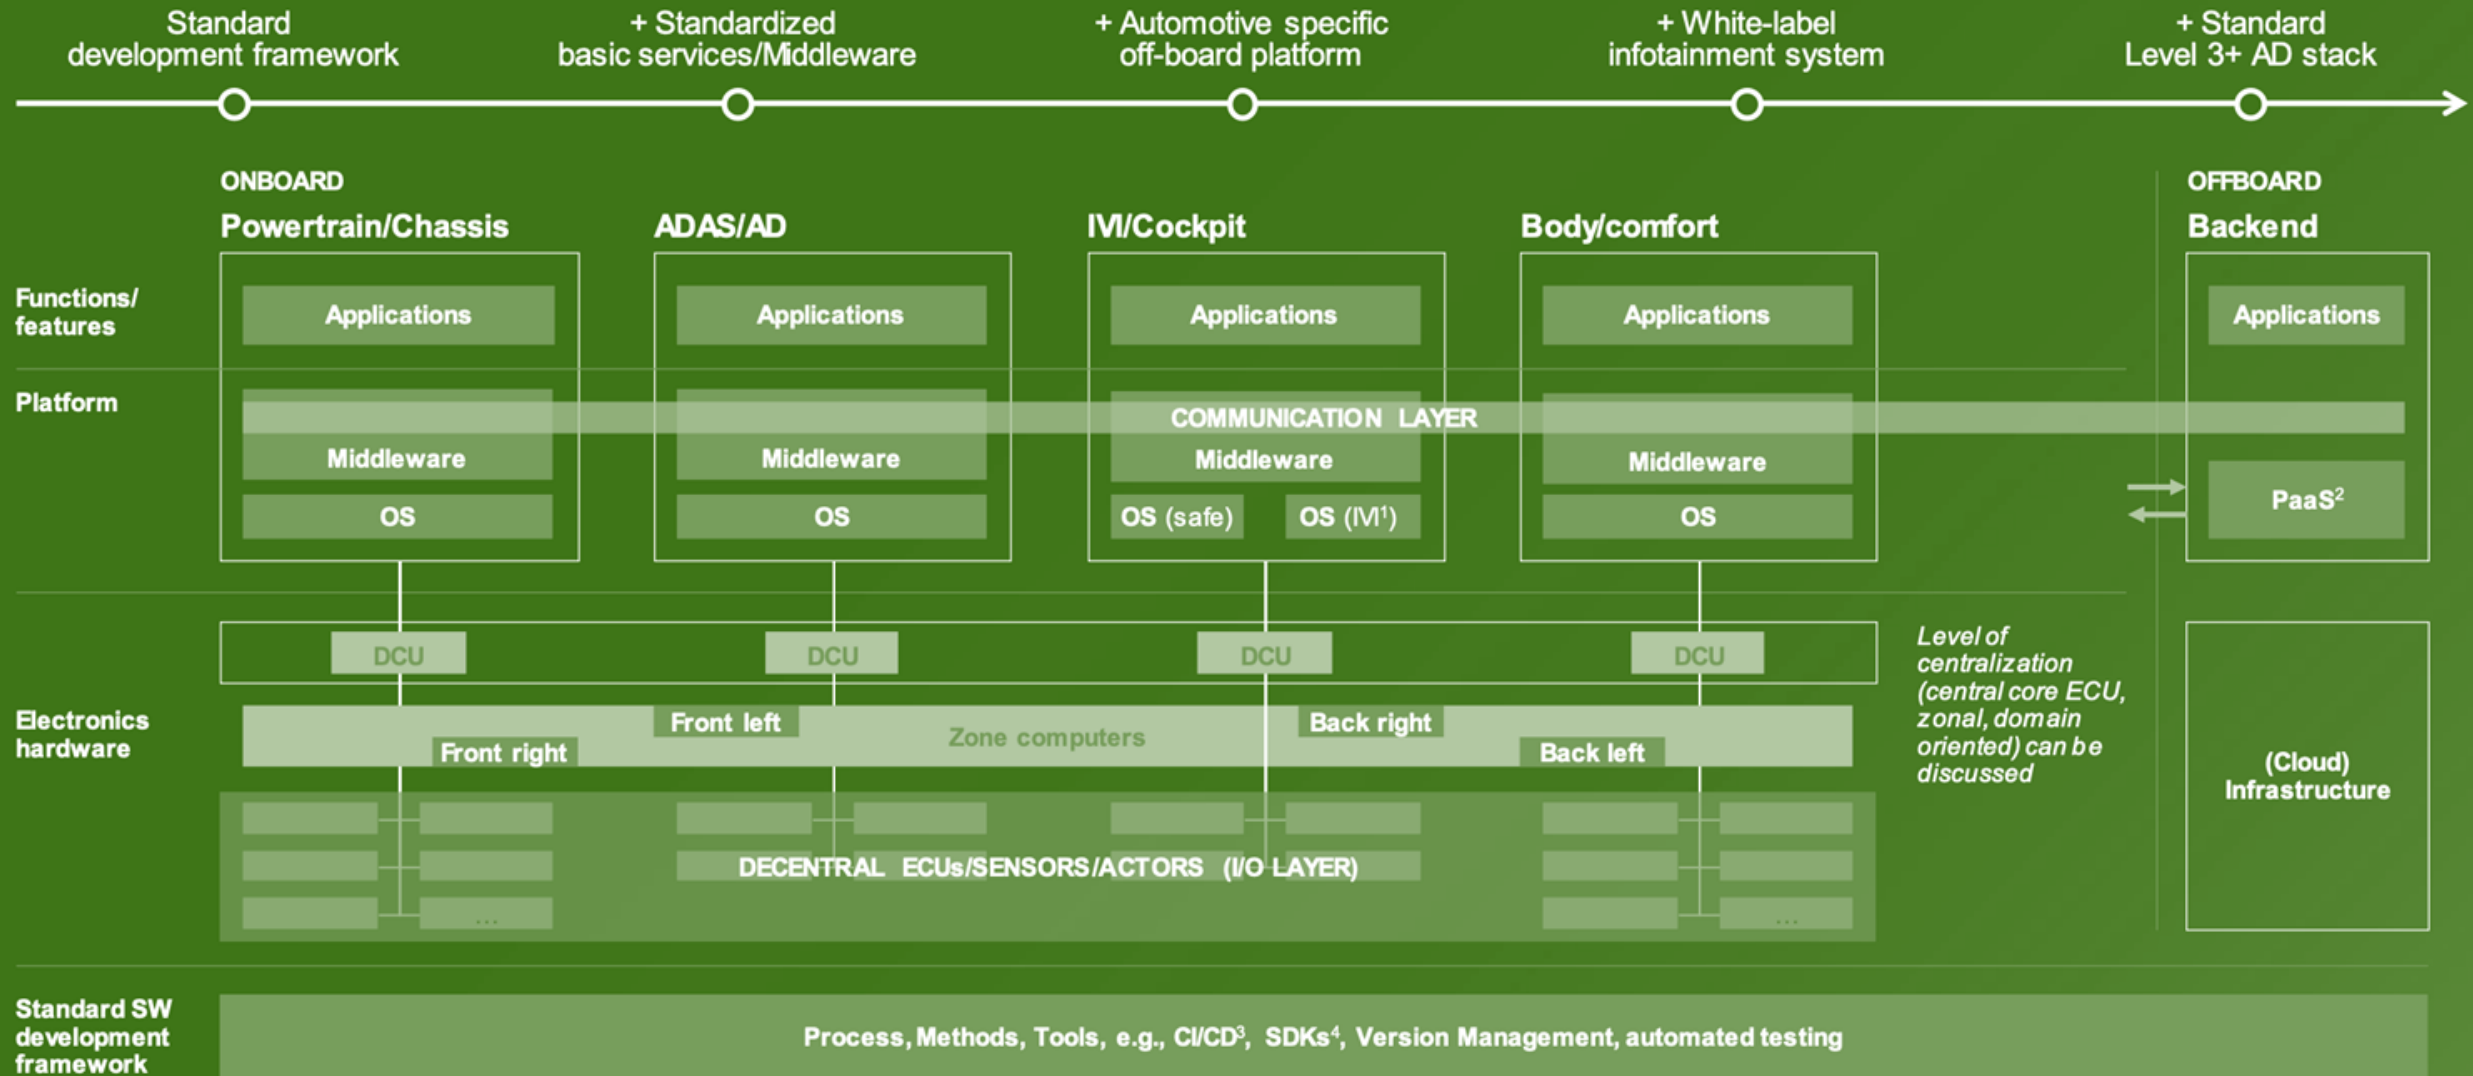

Vehicle Capability Abstraction

Signal to Service Translation

Hardware I/O Abstraction

# The E/E and SW Technology Stacks

# Cloud-based development

Strategy is structured around developing open platforms that will continuously evolve

- Platforms where software cycles are disconnected from hardware cycles,
- Platforms that are designed around their capabilities, features can be continuously updated and added over the year.
- Platforms that will become better over time

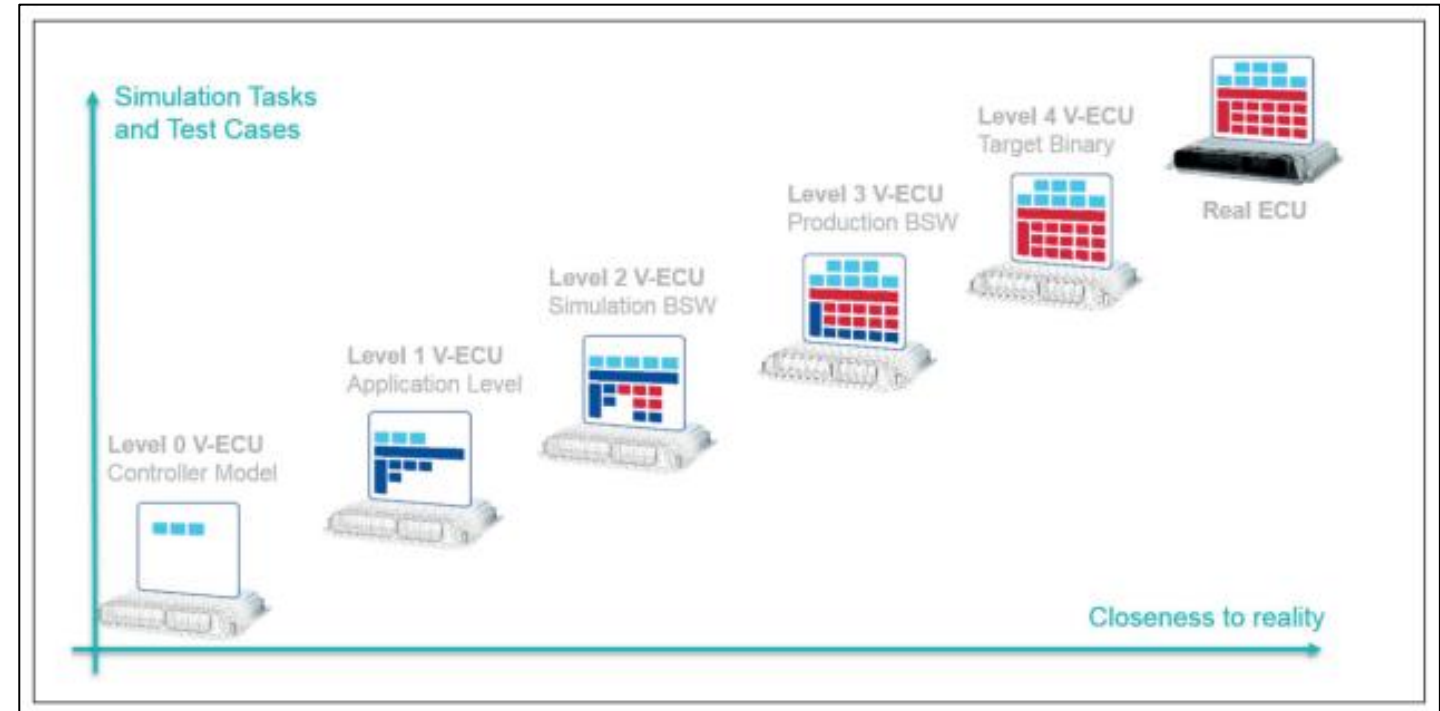

**Hariharan Lakshminarayanan**

Principal Software development manager  
– India and Asia Pacific , Stellantis

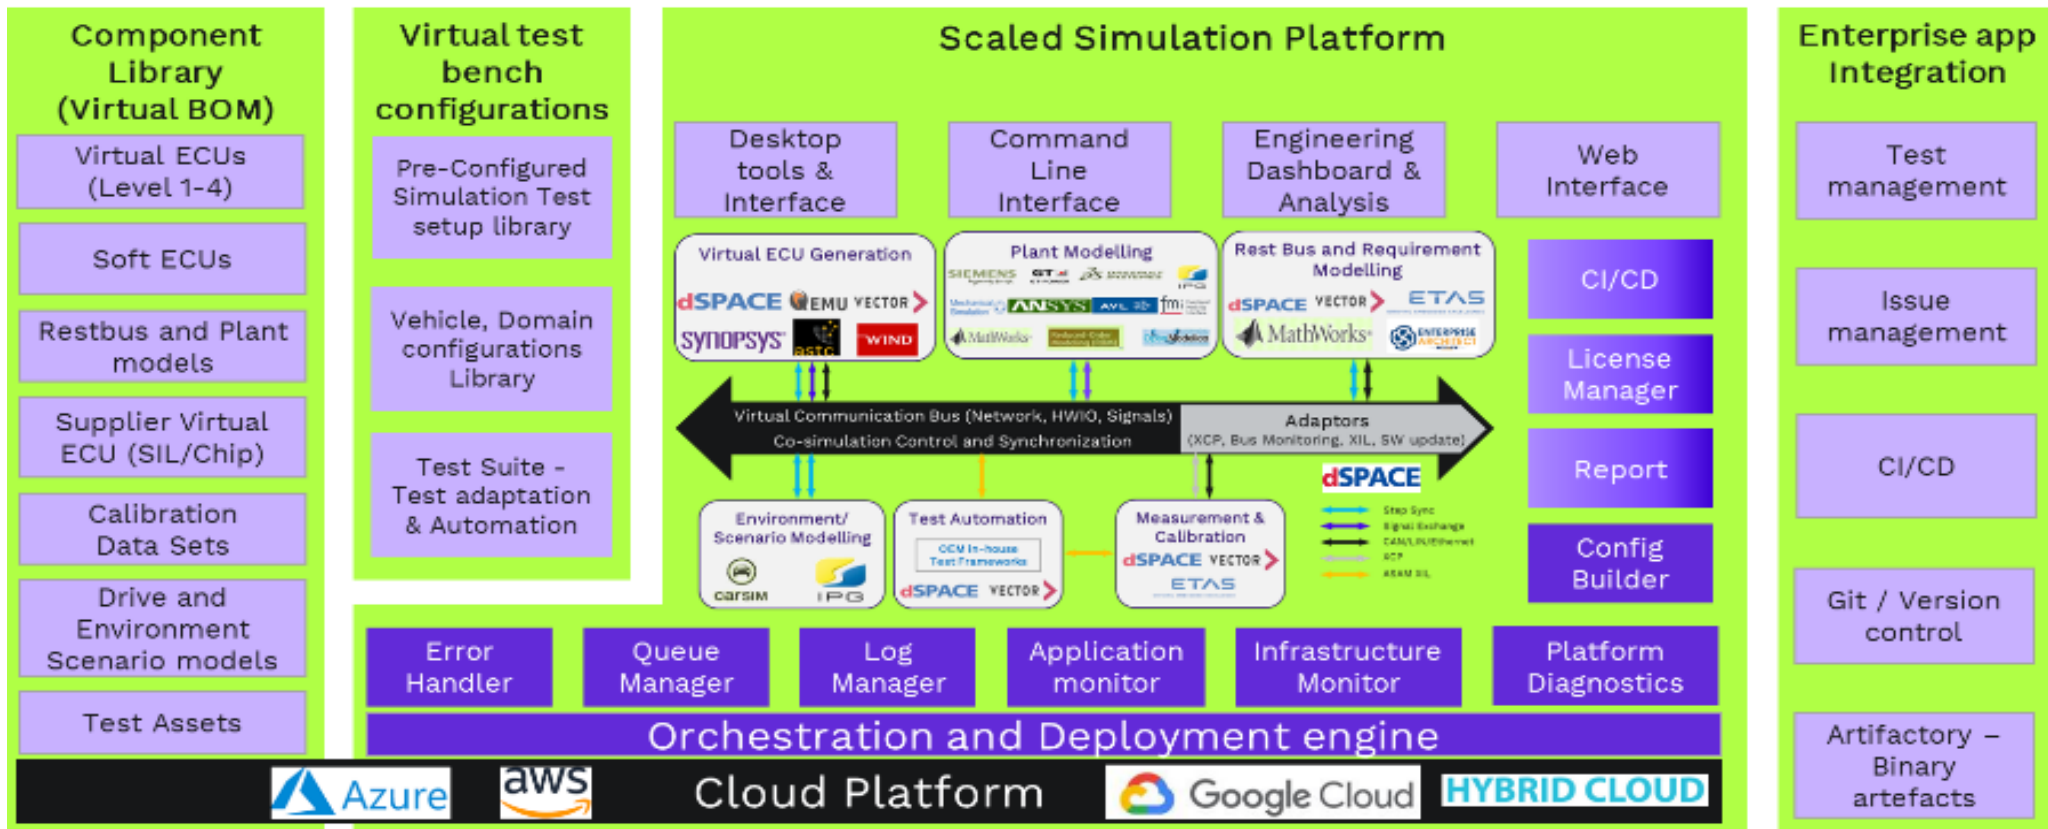

# Virtualization techniques

- Complexity of E/E architectures in modern vehicles has been increasing rapidly for years.
- In the context of SDVs (Autonomous Driving), the need for validation by means of “virtual testing” becomes a necessity
- Extremely large number of tests performed in this context can no longer be executed using only real test drives or Hardware-in-the-Loop systems.

**Hariharan Lakshminarayanan**  
Principal Software development manager  
– India and Asia Pacific , Stellantis

# Infrastructure Set up

- Single sourced Development, implementation partner
- Bringing platform IP components– for faster roll out
- Test setup migration, automation and correlation with HIL results
- Integration with OEM enterprise applications
- CICD Pipeline (Beyond Build), BOM generation
- Support, Maintenance, Monitoring

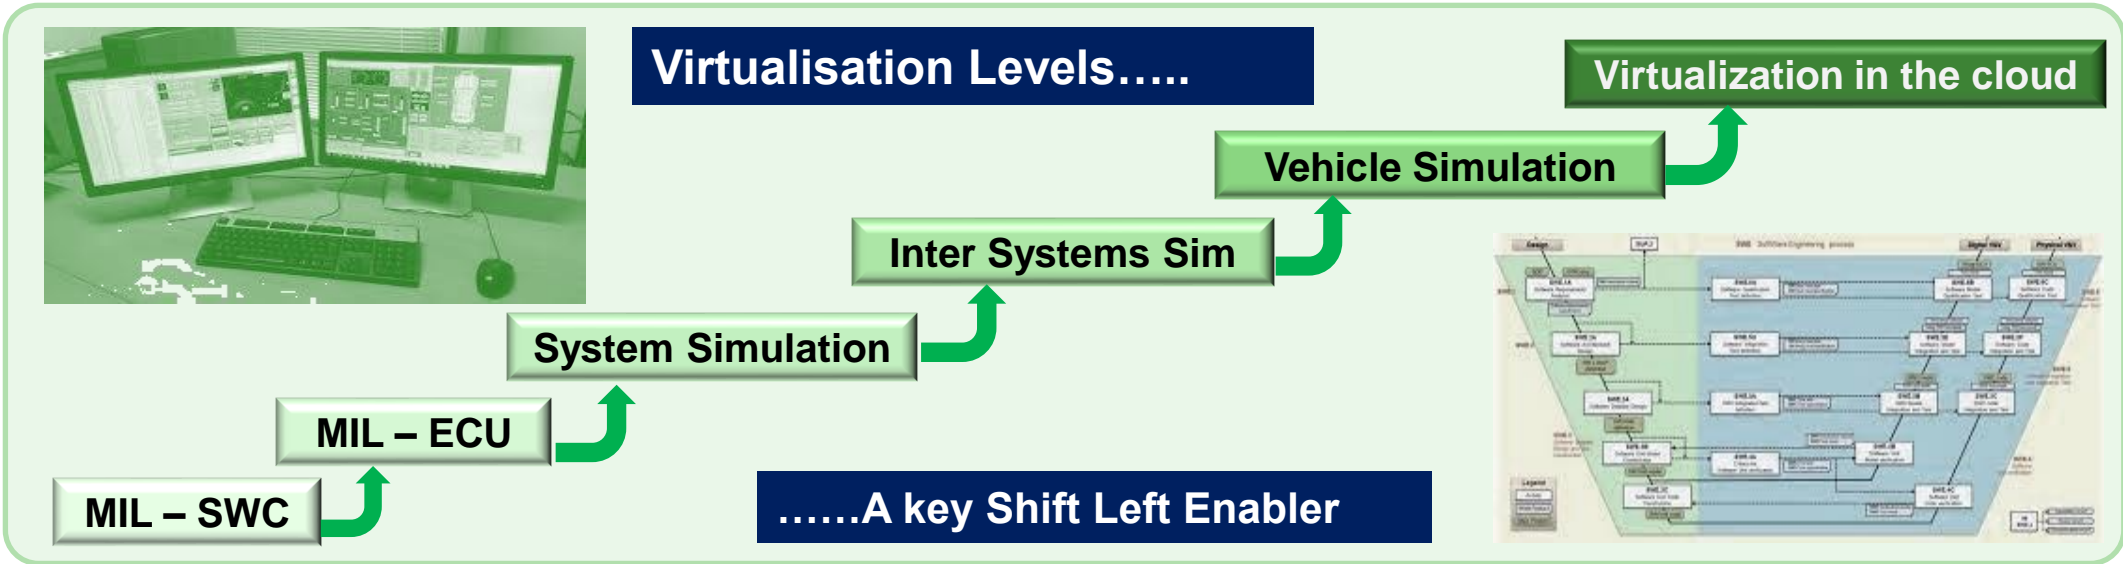

# SDV – Development Virtualization

PROVEN VIRTUAL TECHNOLOGIES MEET AUTOMOTIVE

- > Time Reduction & Increased Coverage
- > Accurate Models and Interactions for Trustable Results
- > Adaptation of Release Processes

MBD Offers .....	Leading to .....
Ease of Reusability	Productivity improvement
Rapid Prototyping	Quicker conceptualization
Ease of Interface & Integrate Models	Unit, Component, ECU & System level virtual testing
Shift Left / Virtualisation	Faster Time to Market
Collaboration between different teams	Eases understanding of complex systems

**Bhupesh Tekade**  
 Deputy Vice president – Embedded  
 SW development , RNTBCI

# SDV – Development Virtualization

PROVEN VIRTUAL TECHNOLOGIES MEET AUTOMOTIVE

- > Standardization vs. USP
- > Partnering vs. Competition
- > One-time Product Price vs. Revenue Streams

# Upskilling and reskilling of workforce to be prepared for the SDV journey

## Technical Skills

System Engineering

New OS entrant in Automotive Android

RUST

Cloud driven SW development

Virtual Validation

DevOps Driven HIL Validation

New Semiconductor Platform

## Overarching Skills

Software Quality

Guidelines and Standards

Design Principles

Architecture and Algorithmic Skills

## Need of Collaboration – Horizontal Approach

- SDV needs diverse Technologies – Vehicle systems, Software, High Performance Computing, Car OS, Android, Cloud, etc
- Each Technologies have big Tech players in their own fields
- Utilize & Build on own proven track records
- Shared investment & Lower risk due to partnership

### Benefits:

- Co-develop solutions - Faster development time
- Keep focus & control on core Competencies
- Efficient Program Management
- Revenue generation by offering solutions for Open Market

**Software  
Factory**

**Google**

**Qualcomm**

**Valeo**

**KPIT**

**Bhupesh Tekade**

Deputy Vice president – Embedded  
SW development , RNTBCI
