

TATA ELXSI

Increasing Complexity of Software in Automotive Industry

Mr. Ashish Khushu

VP & Business Unit Head | Transportation

April 26, 2016

Tata Elxsi | An Introduction

Design, Engineering and Solutions Focus

- Established in 1989, Independent public company, listed on NSE and BSE
- Integrated capability for software, hardware and systems - over 25 years of experience
- ‘Consumer Insights’ led design and UX – studios in London, Bangalore, Pune
- IP and solution accelerators, automation tools and process frameworks to enable customers

Right Scale + Relevant Experience

- 5000+ engineers and growing
- Experience in aligned industry verticals – CE, Broadcast, Communications, Medical
- Flexible engagement models – ODC, CoE, Program based, Fixed Bid, T&M, SA

Assured offshore capability and processes

- Over 80% of projects completely delivered through offshore engineering teams
- ASPICE and SEI CMMi Level 5 certified processes
- Consulting & deployment of DevOps, Agile, Cloud Development Environments

Financial Stability and Performance

- \$ 1B market cap, zero debt, large reserves
- Growth leader for Product Engineering Services
- TATA backing and financial strength

Services & Industry Verticals

Technology consulting, R&D, Product Engineering, System Integration and Testing
+ licensable software components & IP to enable time-to-market

Smart TVs & Gateways,
Smart Phones, Tablets,
Consumer AV
equipment,
Broadcast devices and
interactive applications

3G and 4G wireless,
Unified
Communications,
Internet Of Things (IOT),
WiFi, Bluetooth, IP
based voice and video

Consumer Electronics

Automotive

Communications

Medical Electronics

Infotainment,
Telematics, ADAS,
Safety & Security,
Body, Chassis, Hybrids
and Powertrain

Wearable devices,
Imaging and Graphics,
Mobility, Compliance

Product Design & UI

Mechanical Packaging, HMI and User
Experience

Application Software

Middleware, protocol stacks,
applications

System Software

BSP, Drivers and Firmware, OS
porting and optimization

Silicon & Hardware

SoC development, custom board and
hardware design

Key Stories from CES 2016

- **Toyota brings connected vehicle services to mainstream with its own big data centre and SmartDeviceLink**
- **Mercedes-Benz “It’s all about me” user experience**
- **Audi is fully connected, piloted and electrified**
- **Bosch to offer retrofitted eCall solution**
- **Subaru names Magellan as Cloud navigation partner**
- **VW shows BUDD-e van and e-Golf with connectivity**
- **Visteon develops cockpit ECU controller for carmaker**
- **Panasonic unveils in-car content delivery platform**
- **BMW shows AirTouch contactless touchscreen**
- **Nissan Europe selects Microsoft Azure for telematics system**
- **Harman: Connected services, drones, ADAS, active safety, Office 365 and Life-Enhancing Intelligent Vehicle Solution (LIVS)**
- **Magna teases affordable Level 2 autonomous technology in Cadillac ATS concept**
- **Subaru adds Liberty Mutual’s UBI app RightTrack to StarLink infotainment system**
- **QNX releases new software platforms for ADAS, automated driving and in-car acoustics**
- **Faraday Future reveals 1000HP intelligent electric concept car FFZERO1**
- **FCA’s 4th generation UConnect infotainment supports CarPlay and Android Auto**
- **AT&T expands 4G/LTE connected car agreement with Ford & BMW in Americas**
- **Kia’s sub-brand DRIVE WISE will work on intelligent autonomous vehicles**
- **Ford revs up development of autonomous vehicles, home automation and smart mobility**
- **Volvo and Ericsson collaborate to bring streaming content for autonomous cars**
- **Nuance powers BMW’s conversational in-car infotainment system with Dragon Drive**

Key Automotive Industry Trends

- Connected Car
 - Connected Infotainment
 - Telematics
 - Apps
- Automation of Vehicle Functions
 - DAS
 - AEB
 - Steer By Wire
- Efficiencies
 - Lightweight
 - EV/HEV
 - Fuel Alternatives

The “digital” car

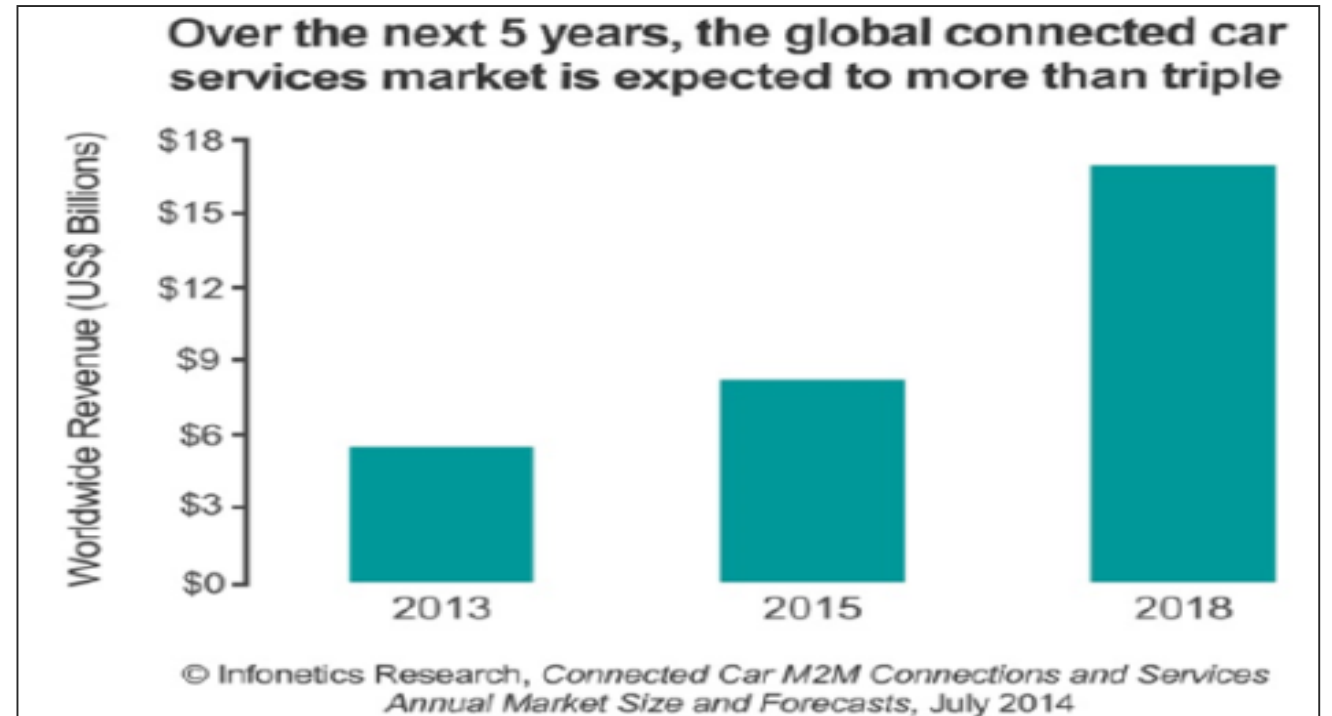

Fighter planes	:	20 M lines of code
High end cars	:	100 M lines of code
Electronics SW	:	< 20% of car cost in 2005
Electronics SW	:	Almost 40% today
Innovation Spend	:	90% in Electronic Systems
Spend on innovation	:	US\$ 105 B in 2014, 4% of revenue
SOC market	:	USD 31B, 7.5% growth

OEMs increasing Model choices but decreasing number of Vehicle Architectures

Connected Car trends

	Total Cars	Connected Cars
2014	1.05 B	8%
2015	1.09 B	10%
2017	1.18 B	14%
2020	1.32 B	20%

Connected Car - Convergence of Technologies

Telematics

- Turn – By – Turn Navigation
- Road Side Assistance
- Location Based Services

Remote Services

- Stolen Vehicle Detection
- Vehicle Health Report
- Geo Fencing
- Diagnostics

ADAS

Rear Seat Entertainment

- Smart Phone Integration
- Security
- Location Based Services

Connectivity

- 3G, 4G
- Car as a Hotspot
- OTA Updates

Connected Infotainment

- Content on the go
- Hands Free Calling / Bluetooth/Voice/ Gesture

 Auto Industry capabilities 

 Non Auto capabilities

Challenges : "Clock Speed" delta between Car & CE

A Typical Program Schedule

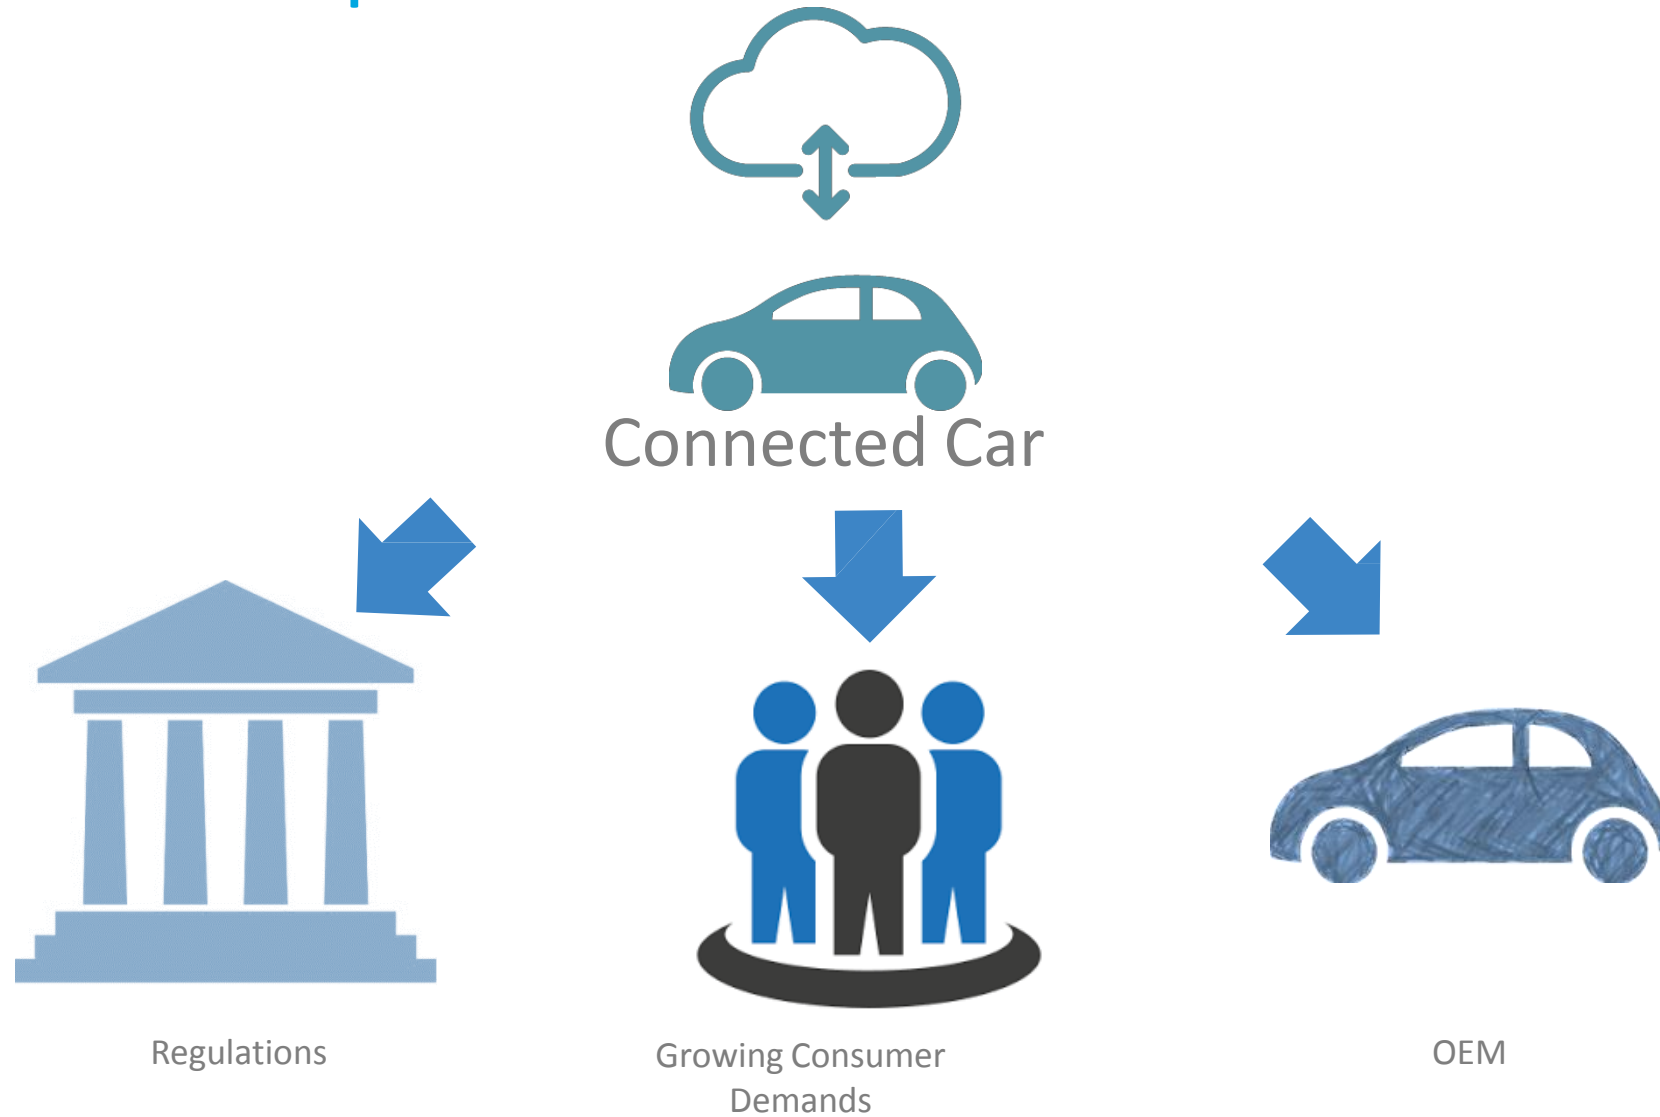

But In 3 years,
Look how things change in the CE world...

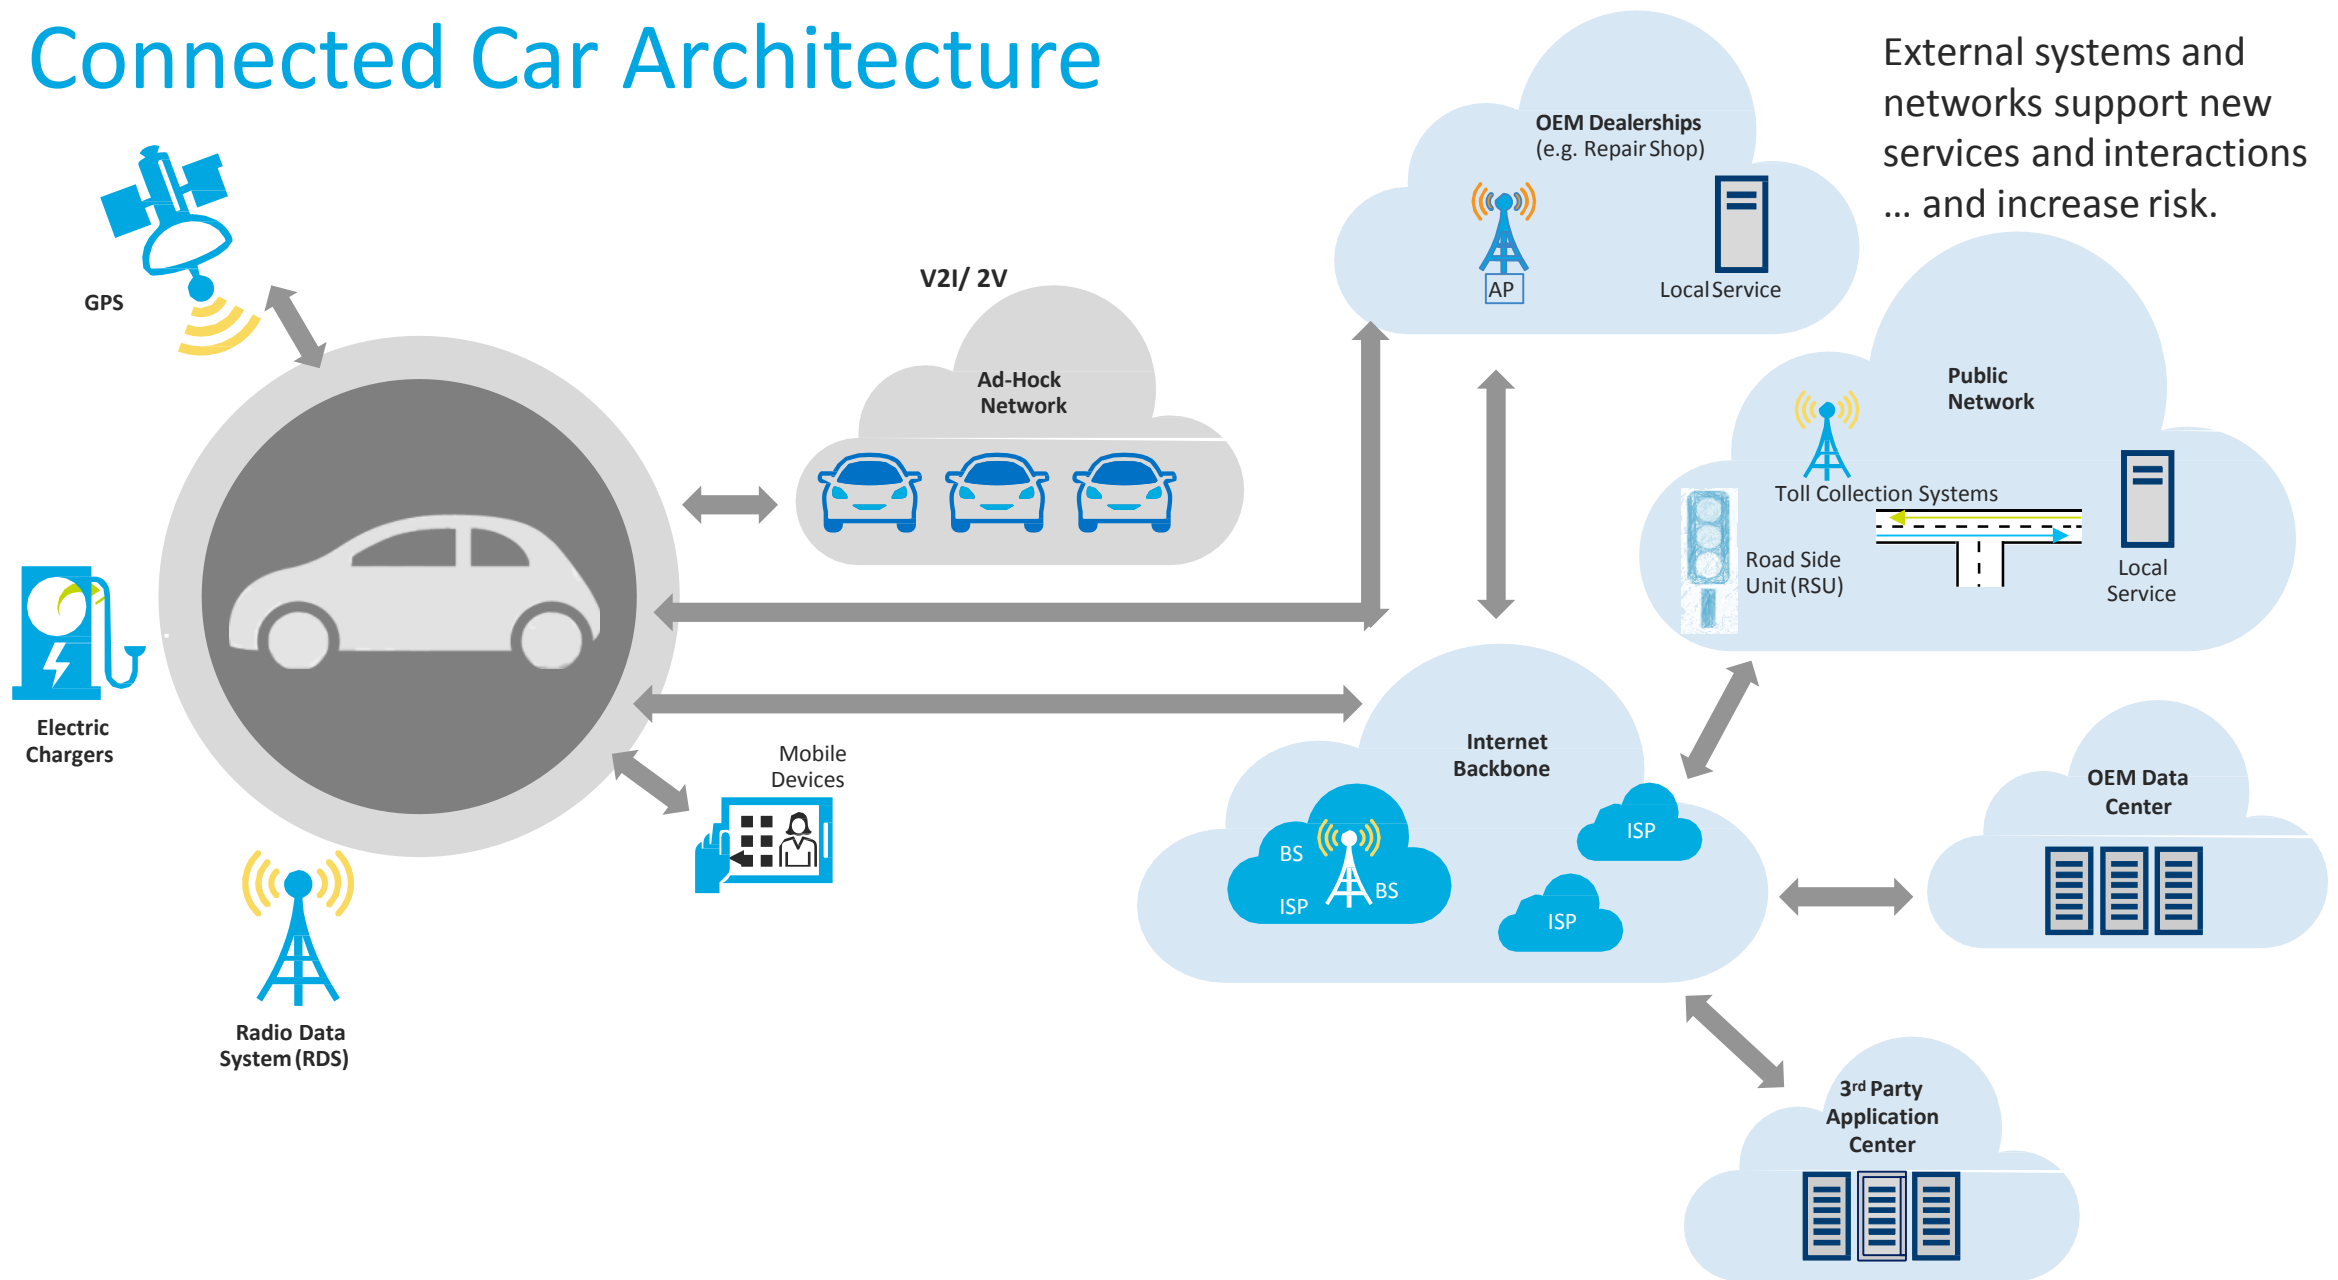

As a result of this dynamic, **85%** of consumers would be willing to pay an additional **\$150** just to have the **option to upgrade** their vehicle electronics

Vehicle development cycles are 3-4 years vs. typical consumer electronics development times of 18 months (or significantly less)

Connected Car Adoption

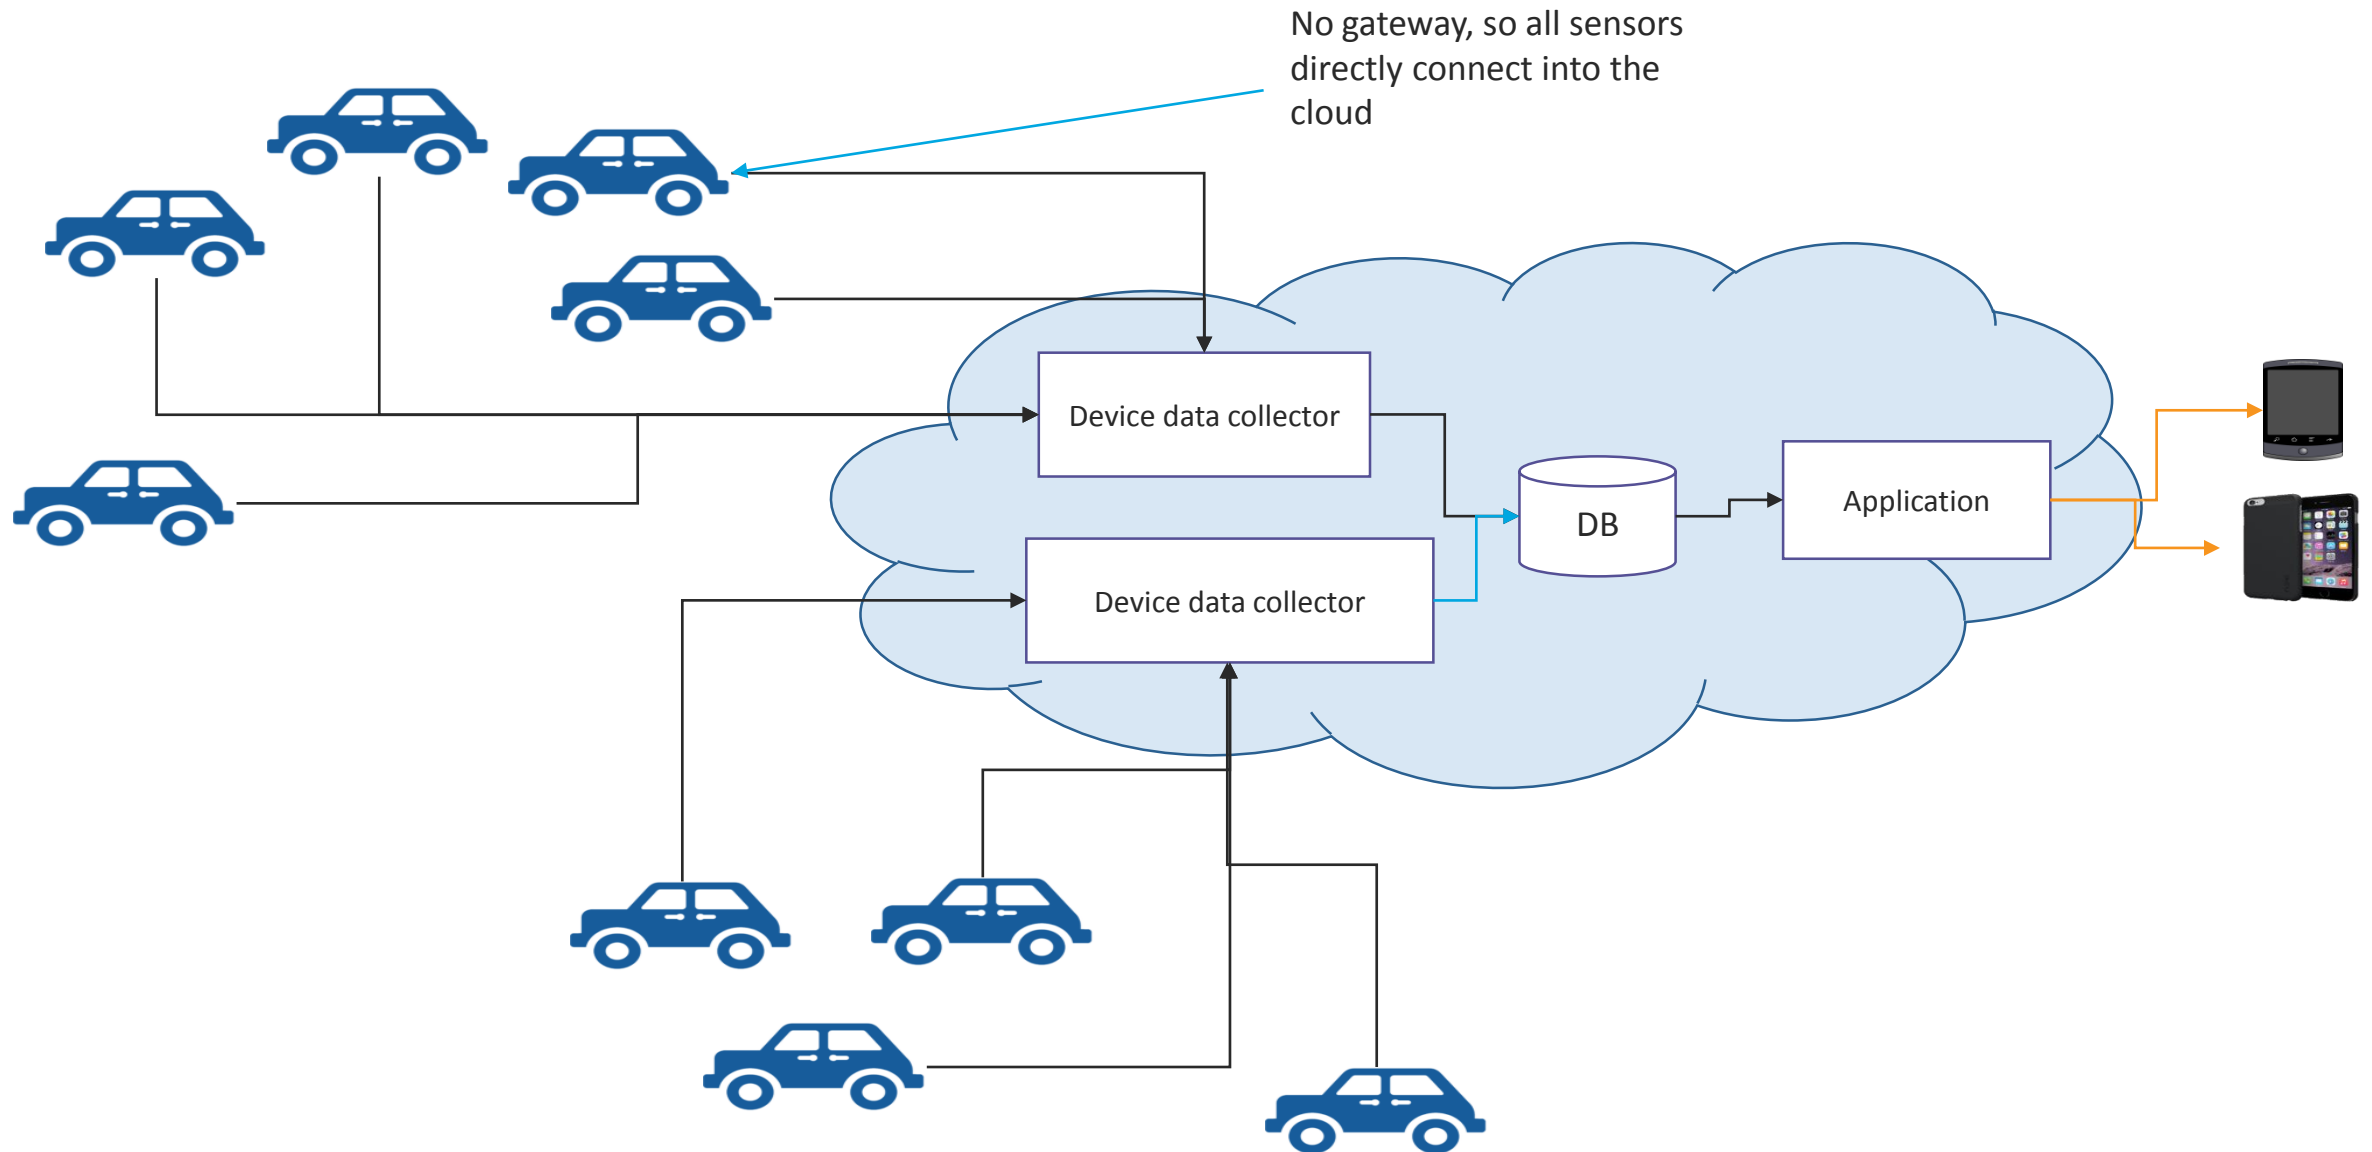

Connected Car Architecture

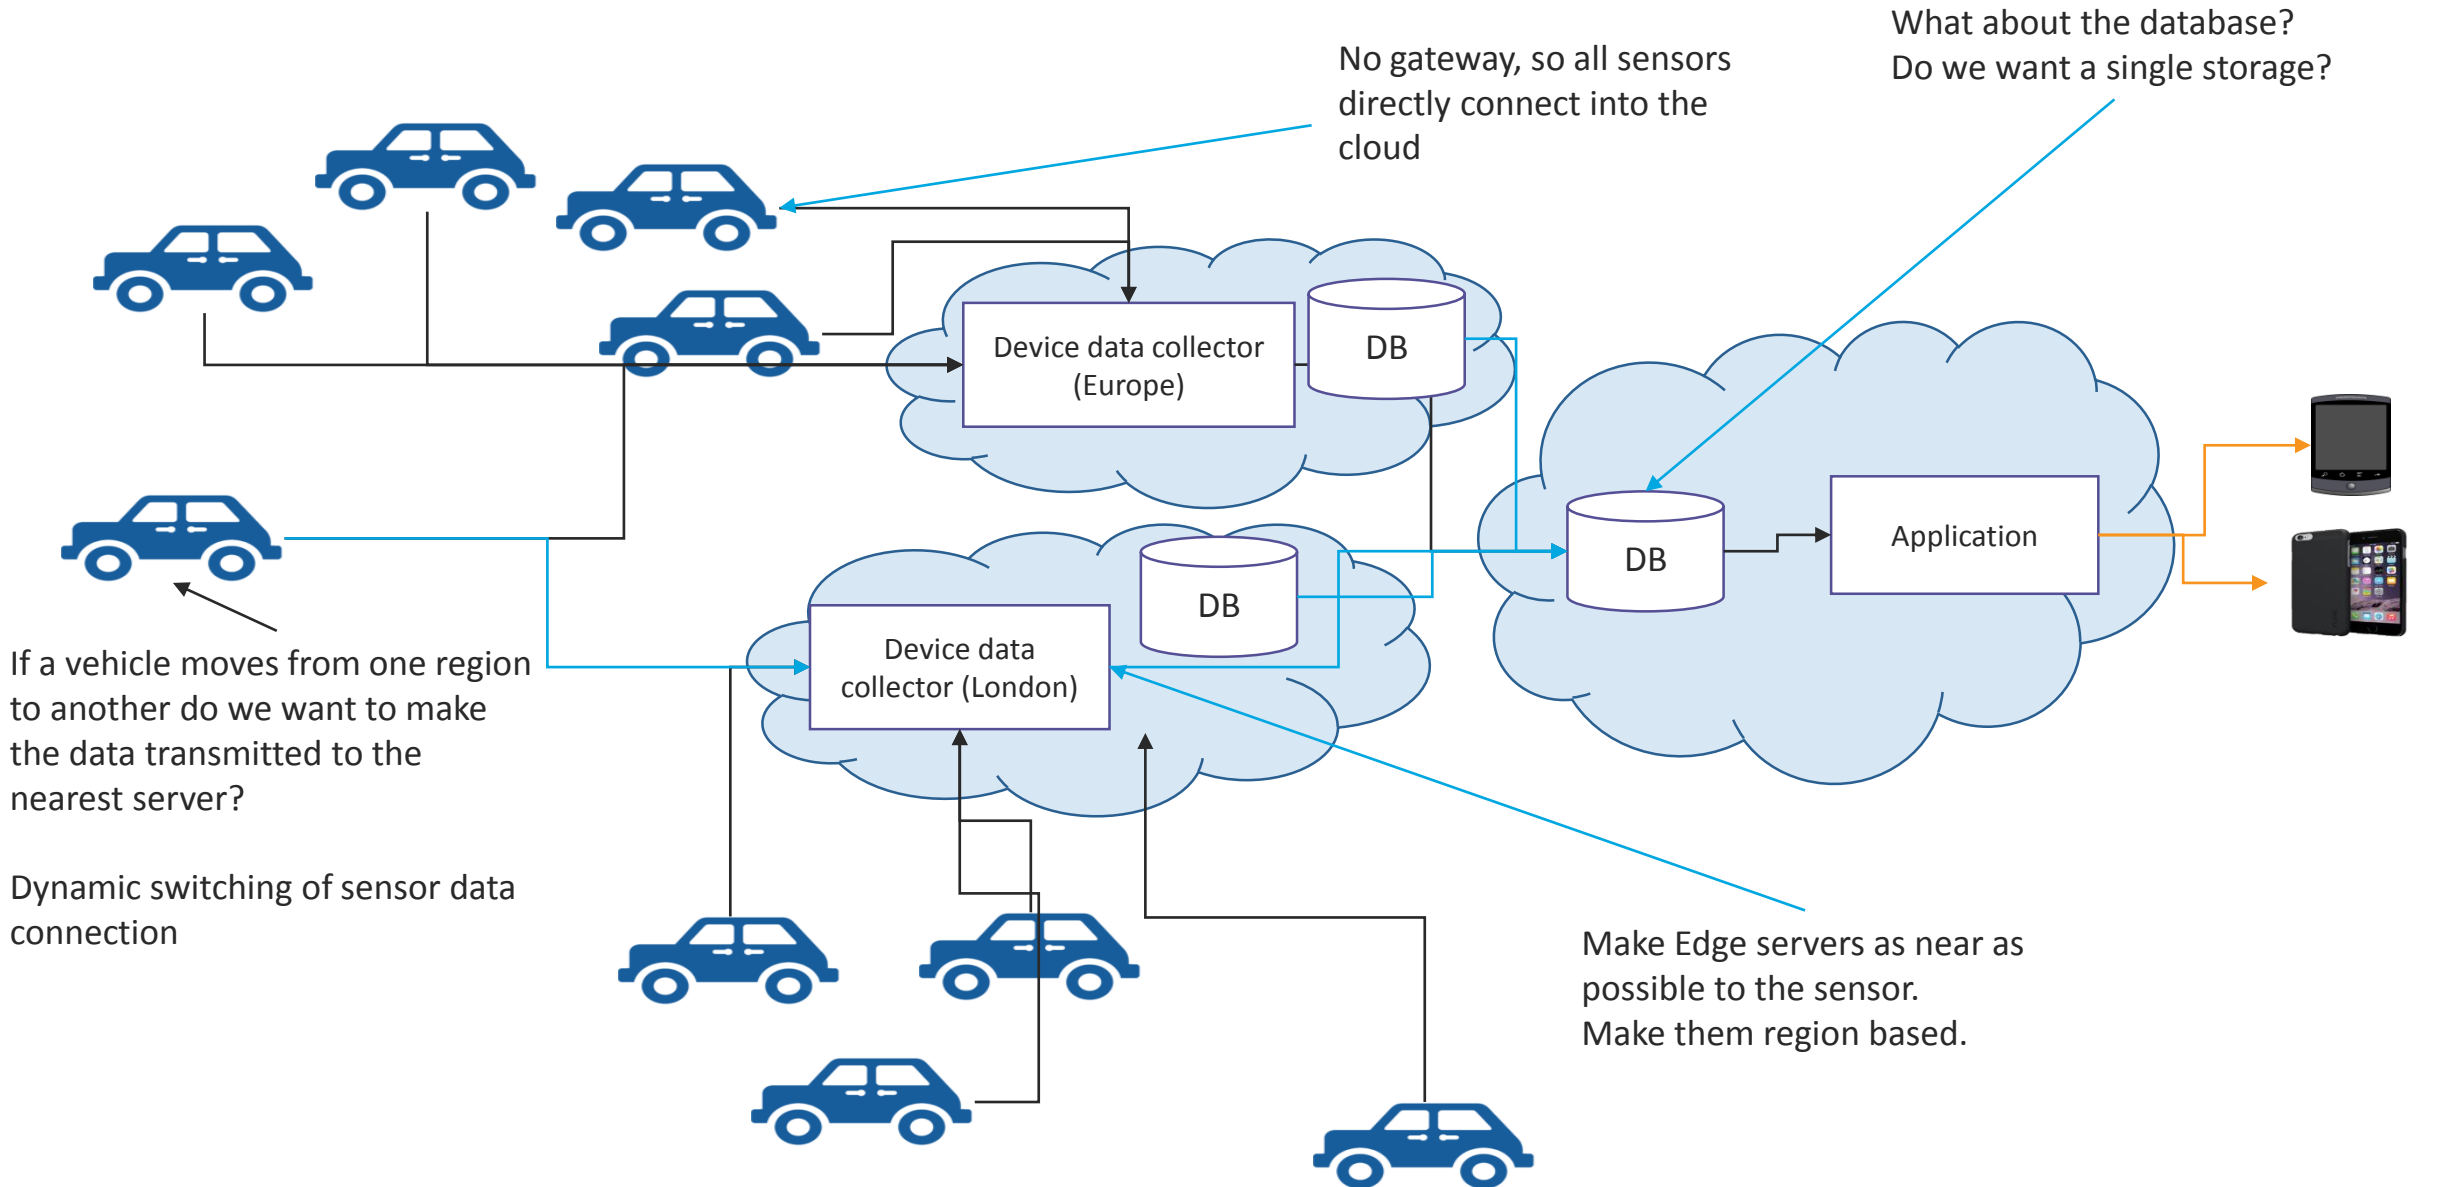

External systems and networks support new services and interactions ... and increase risk.

Connected Car Bird's Eye View

Connected Car Architecture

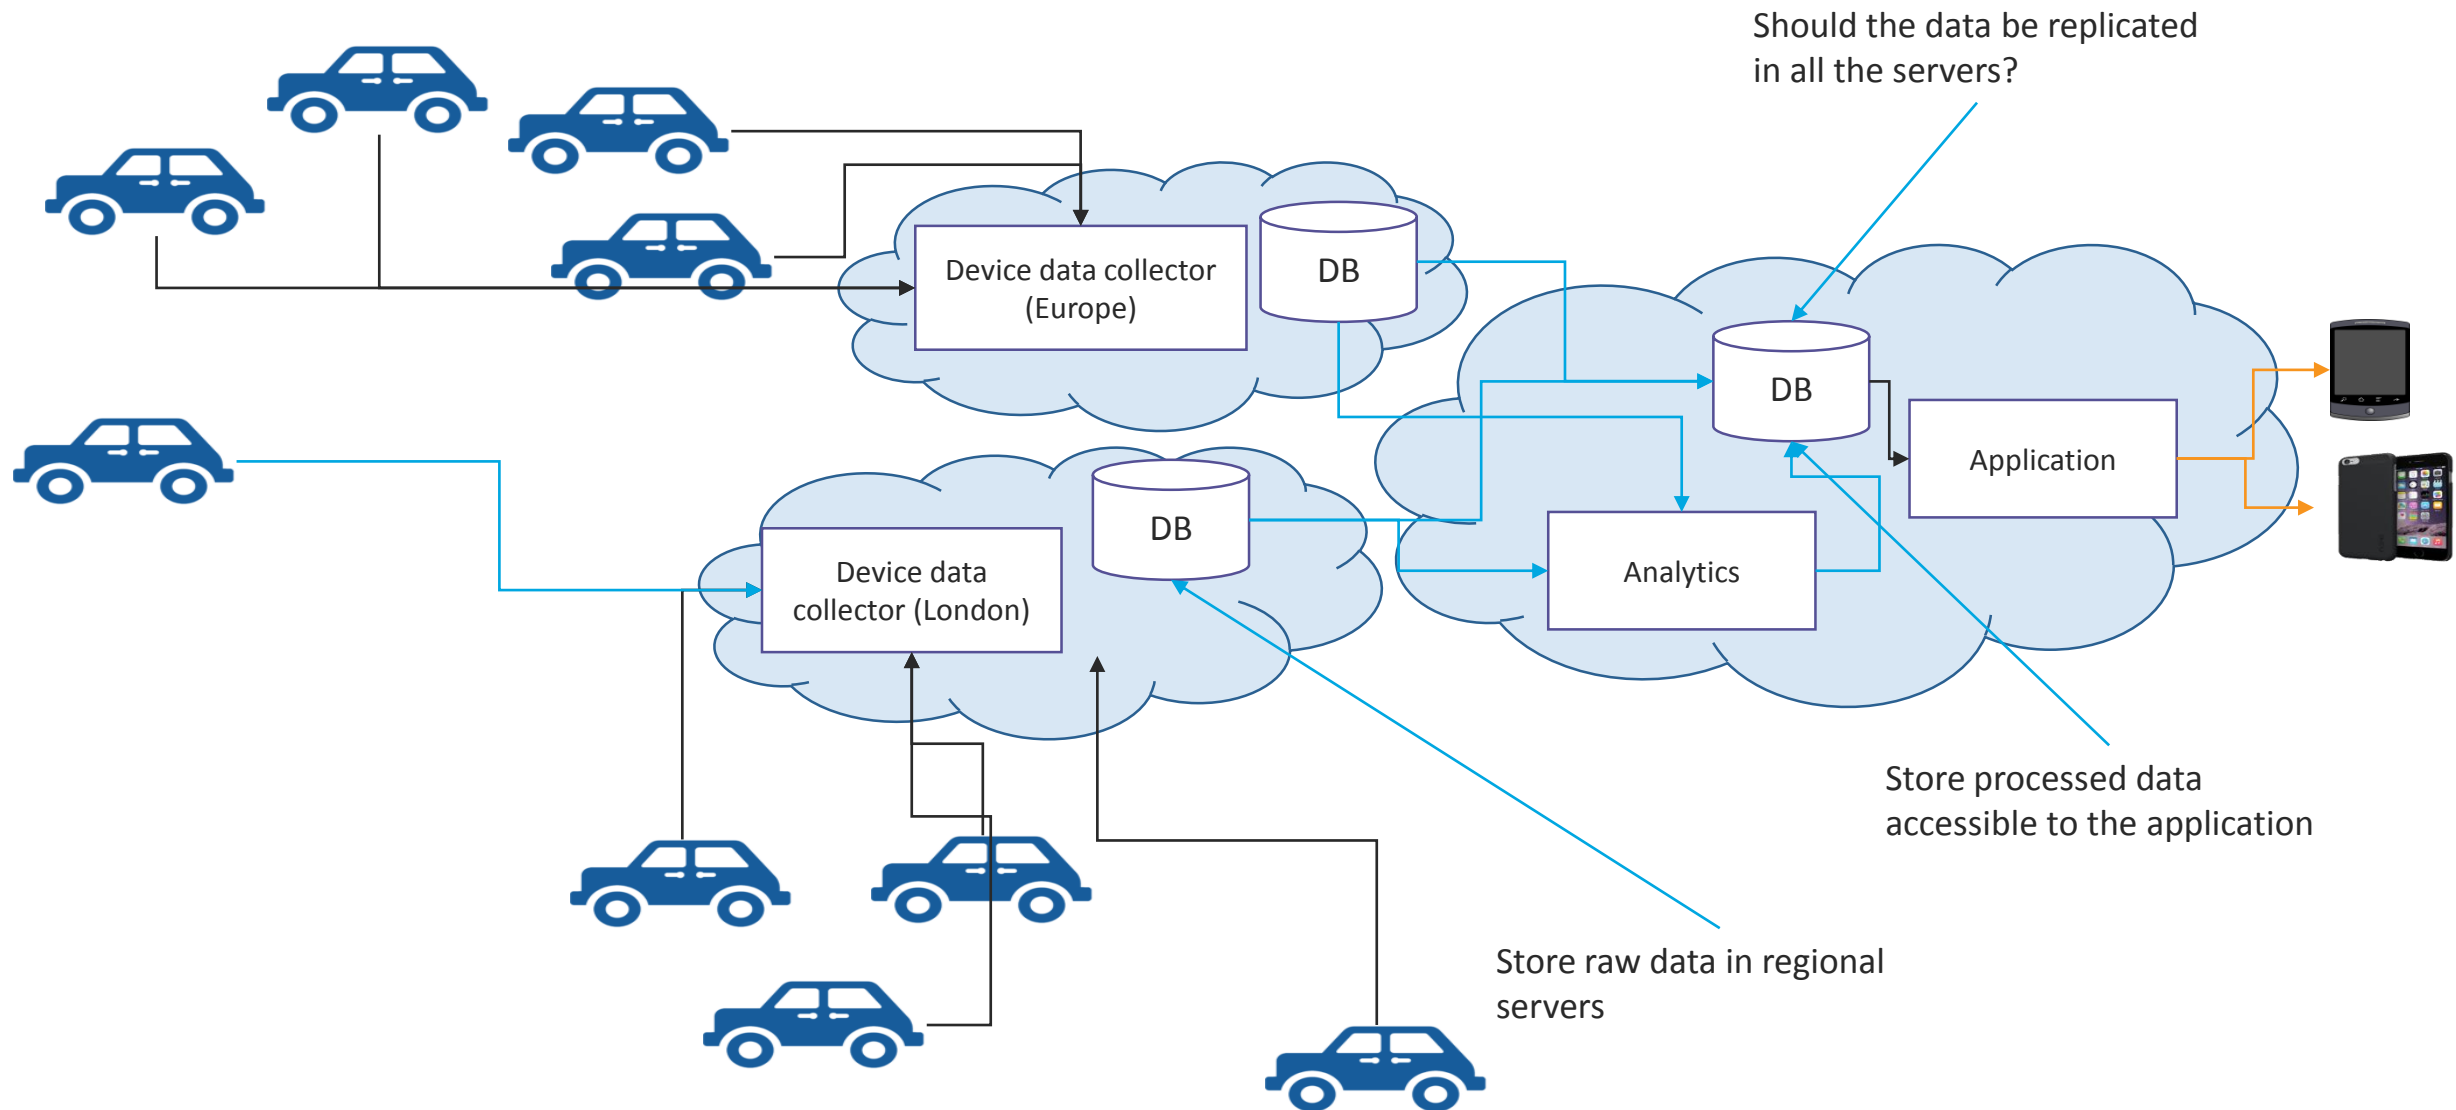

Data Volume: 50GB+/per hour/per car

- Data accuracy vs data size
 - Eg., collect GPS data of vehicle
 - Latitude (8) + Longitude (8) + number of satellites (4) + direction (4) + altitude (4) = 28 bytes per collection per vehicle
 - Collect every 5s
 - 12 points every minute = $28 * 12 * 60 * 24 = 483,840$ per day
 - i.e., 14, 515, 200 = approximately 15MB per month per vehicle
 - Collect every 1s
 - 60 points every minute = $28 * 60 * 60 * 24 = 2,419,200$ per day
 - i.e., 72, 576, 000 = approximately 72MB per month per vehicle
 - Data size increased 4.8 times when we increase frequency
 - But accuracy is lost when we reduce frequency
- Accuracy required depends on data
 - Eg., For Vehicle tracking system,
 - If real-time route tracking is a requirement, location needs to be collected at a high frequency in seconds
 - While velocity of the vehicle can be tracked at a frequency of minutes maybe every 5 minutes
- Trade-off between accuracy and volume

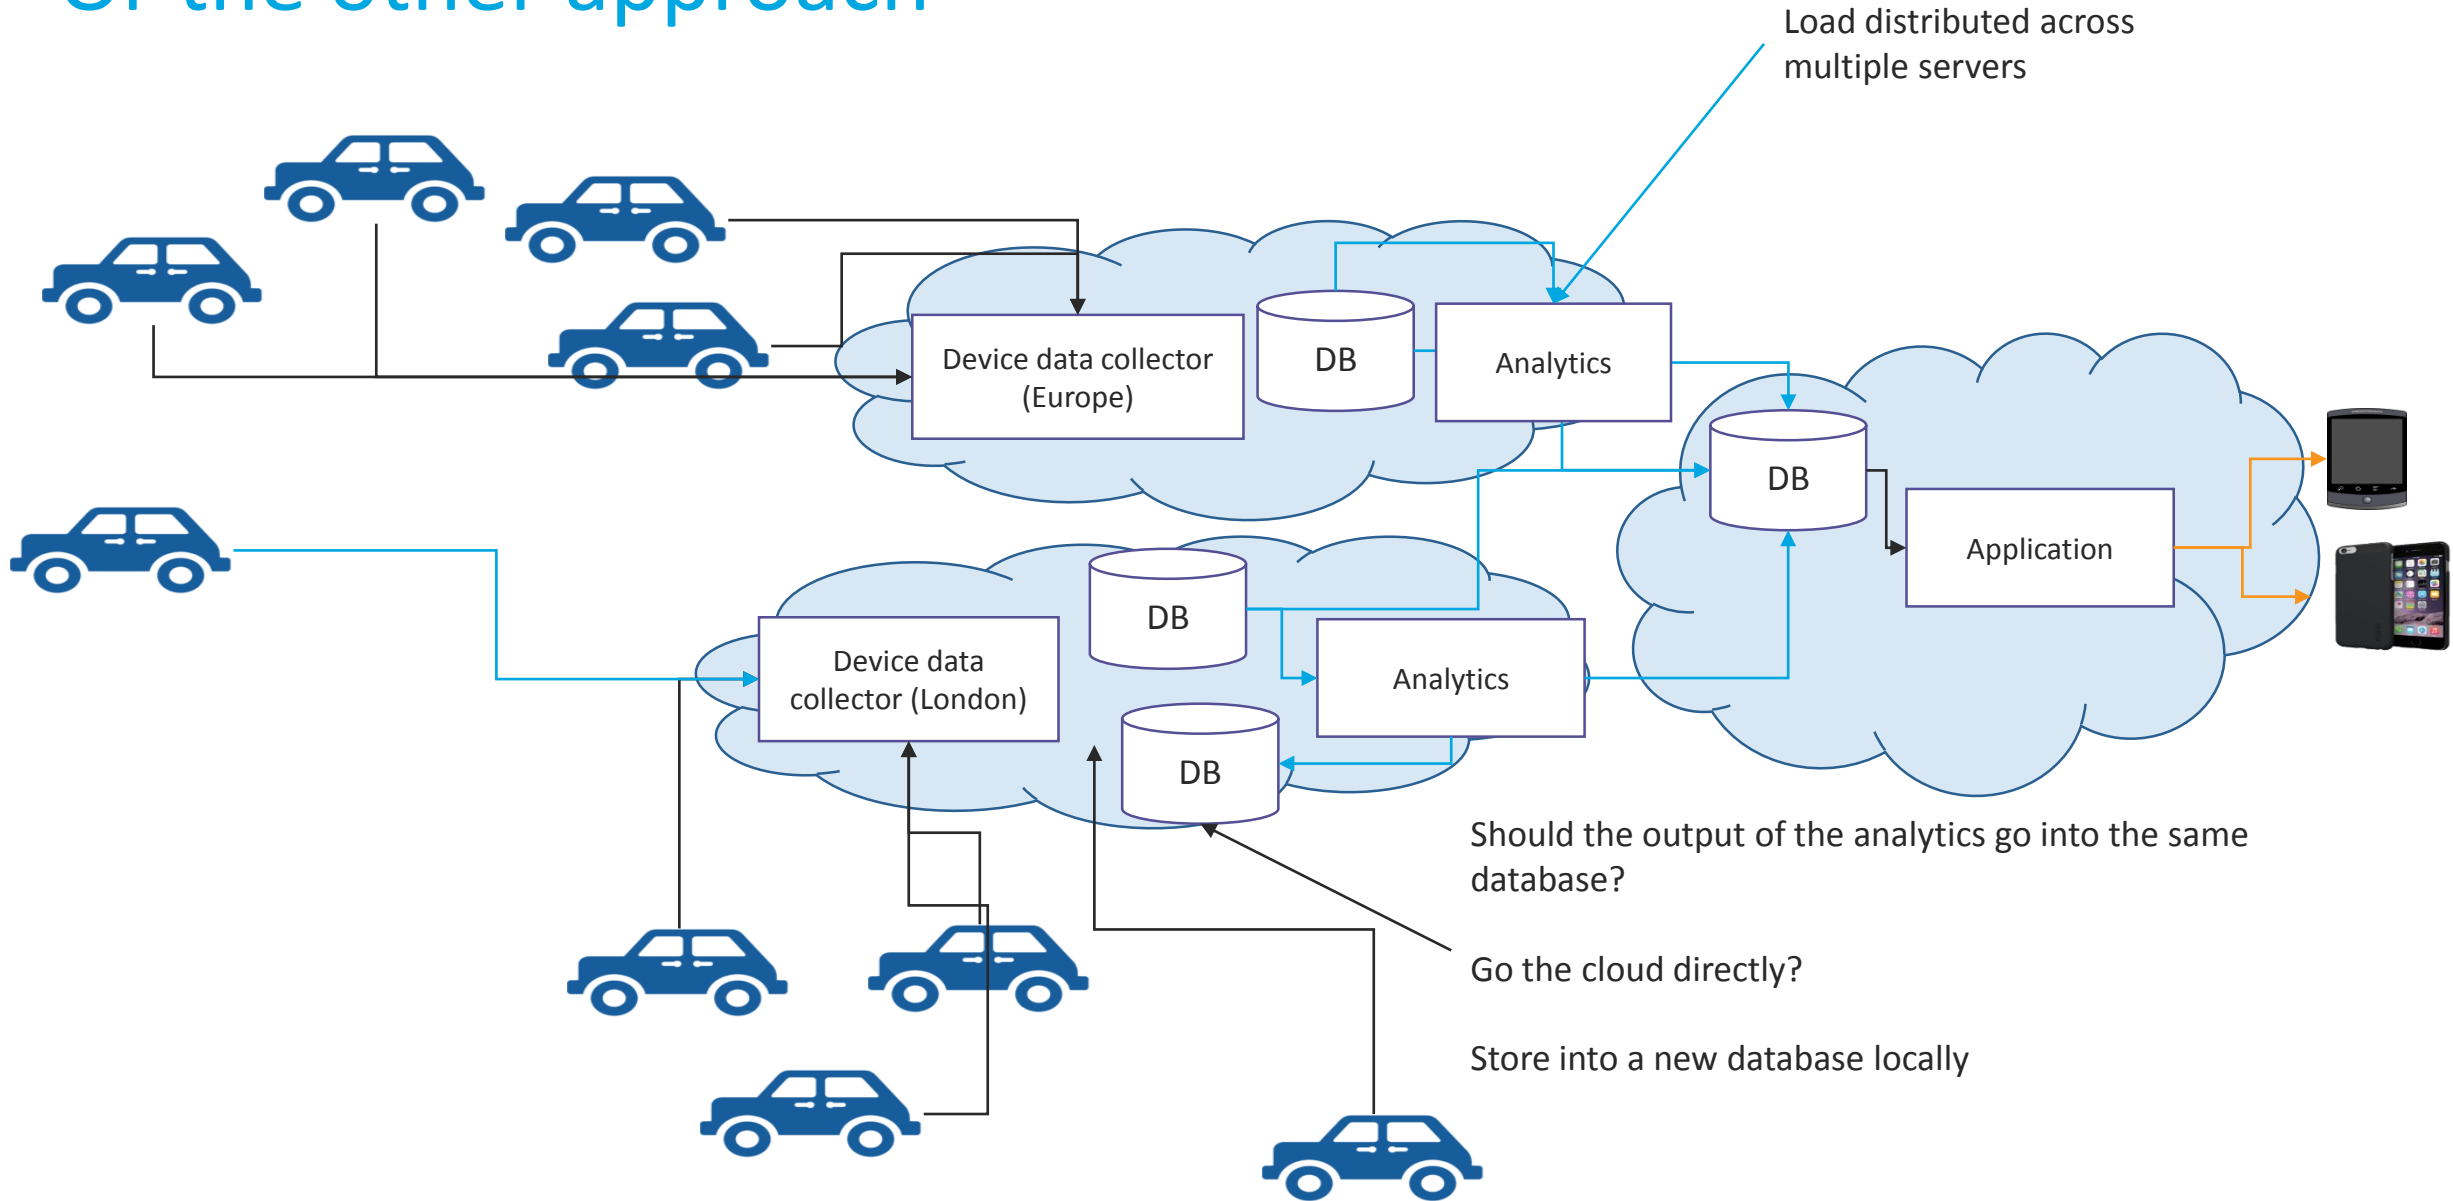

Database Choice: The Data Type

- Is Data geospatial?
 - For eg., Vehicle Management
 - Location of vehicles is location based
 - Need to know relations of vehicles w.r.t each other
 - Need geospatial representation of data
 - Geospatial query of data
- Is Data temporal in nature?
 - For Vehicle Management
 - Where was the vehicle at 12:00 and where is it now?
 - Need time-series databases
- Need both in the same database

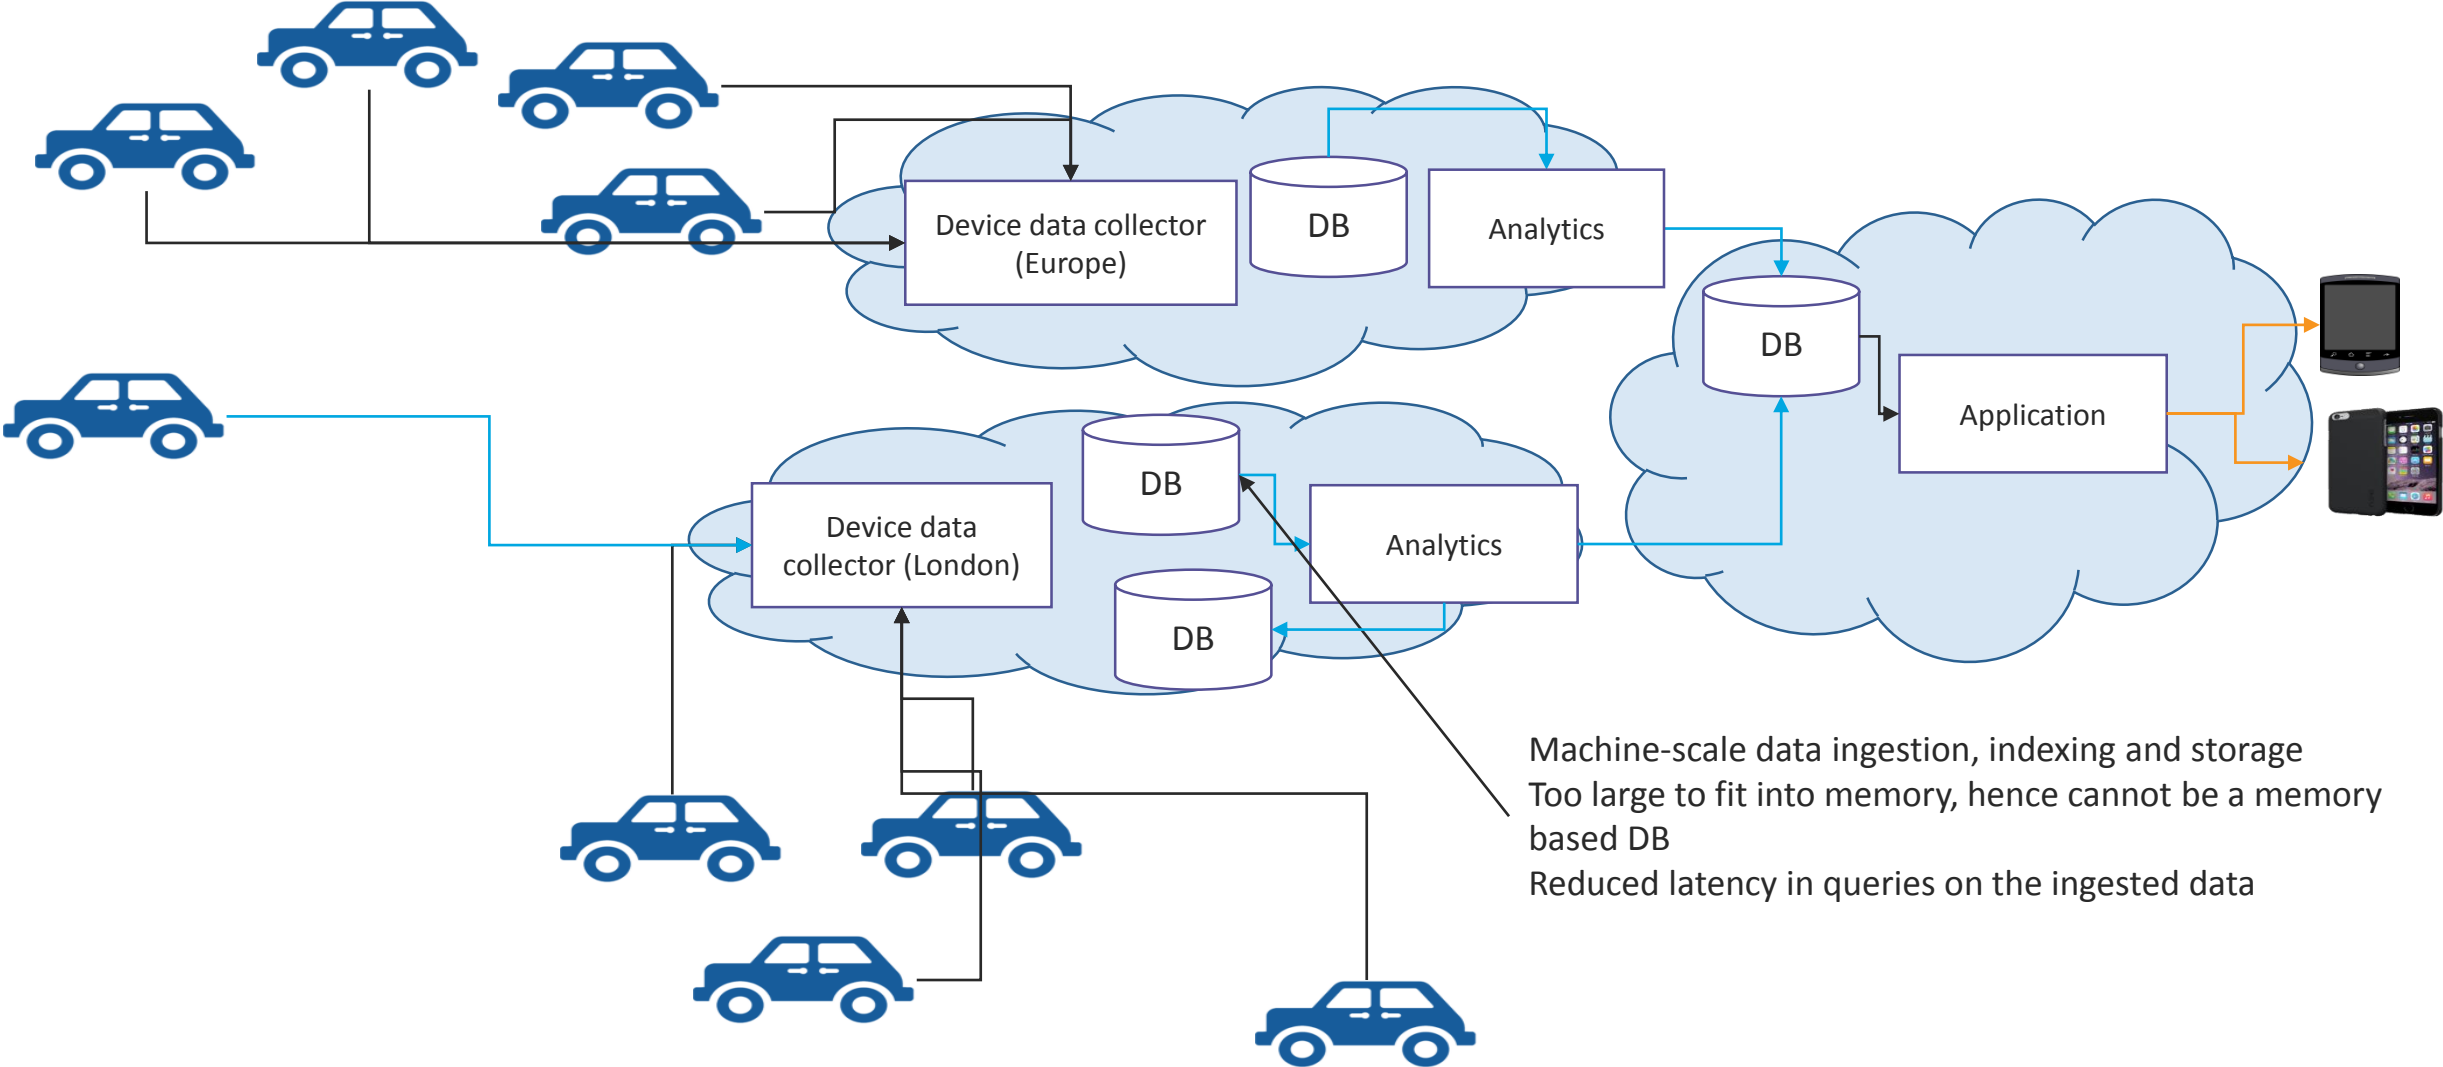

Data Volume impact on Architecture

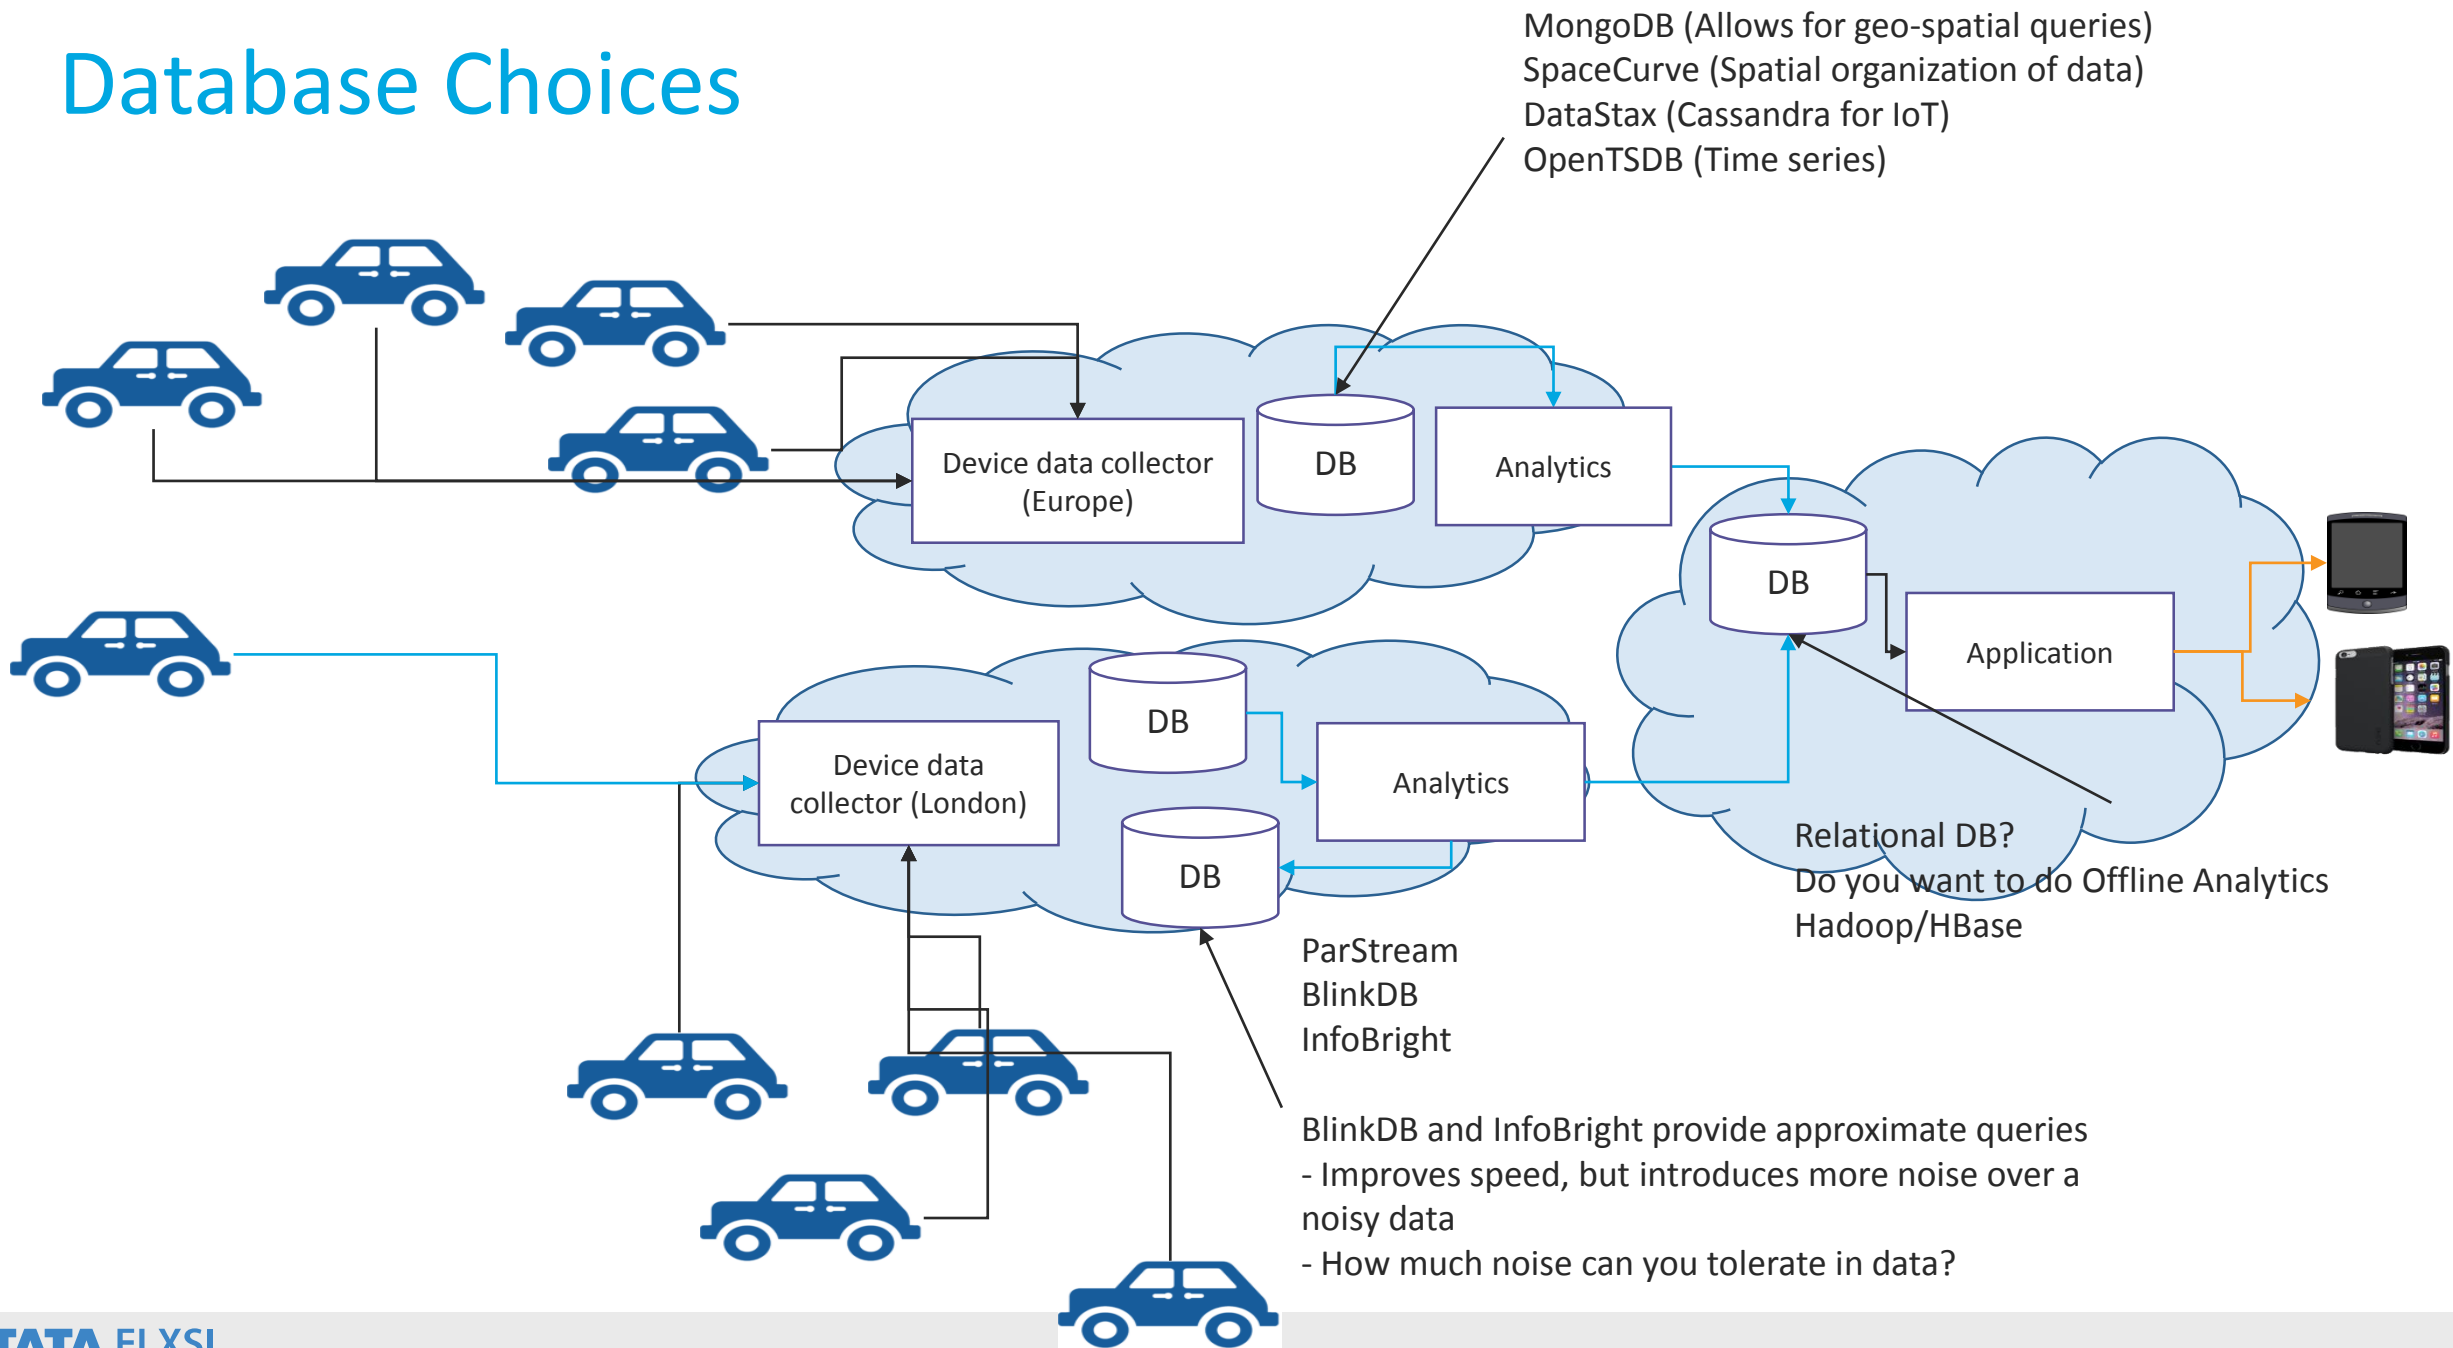

Or the other approach

Database Choice: Data ingestion rate

Database Choices

The Data Variety

- Data from different sources have to be related to each other
- Different frequencies how tie data together to make meaning out of it?
- Applications have to be built on co-related data
- For vehicle management
 - Current location of the vehicle collected from GPS
 - Current velocity of the vehicle collected from OBD
 - Data collected at different frequencies.
 - Co-related to determine if speed limits are being violated

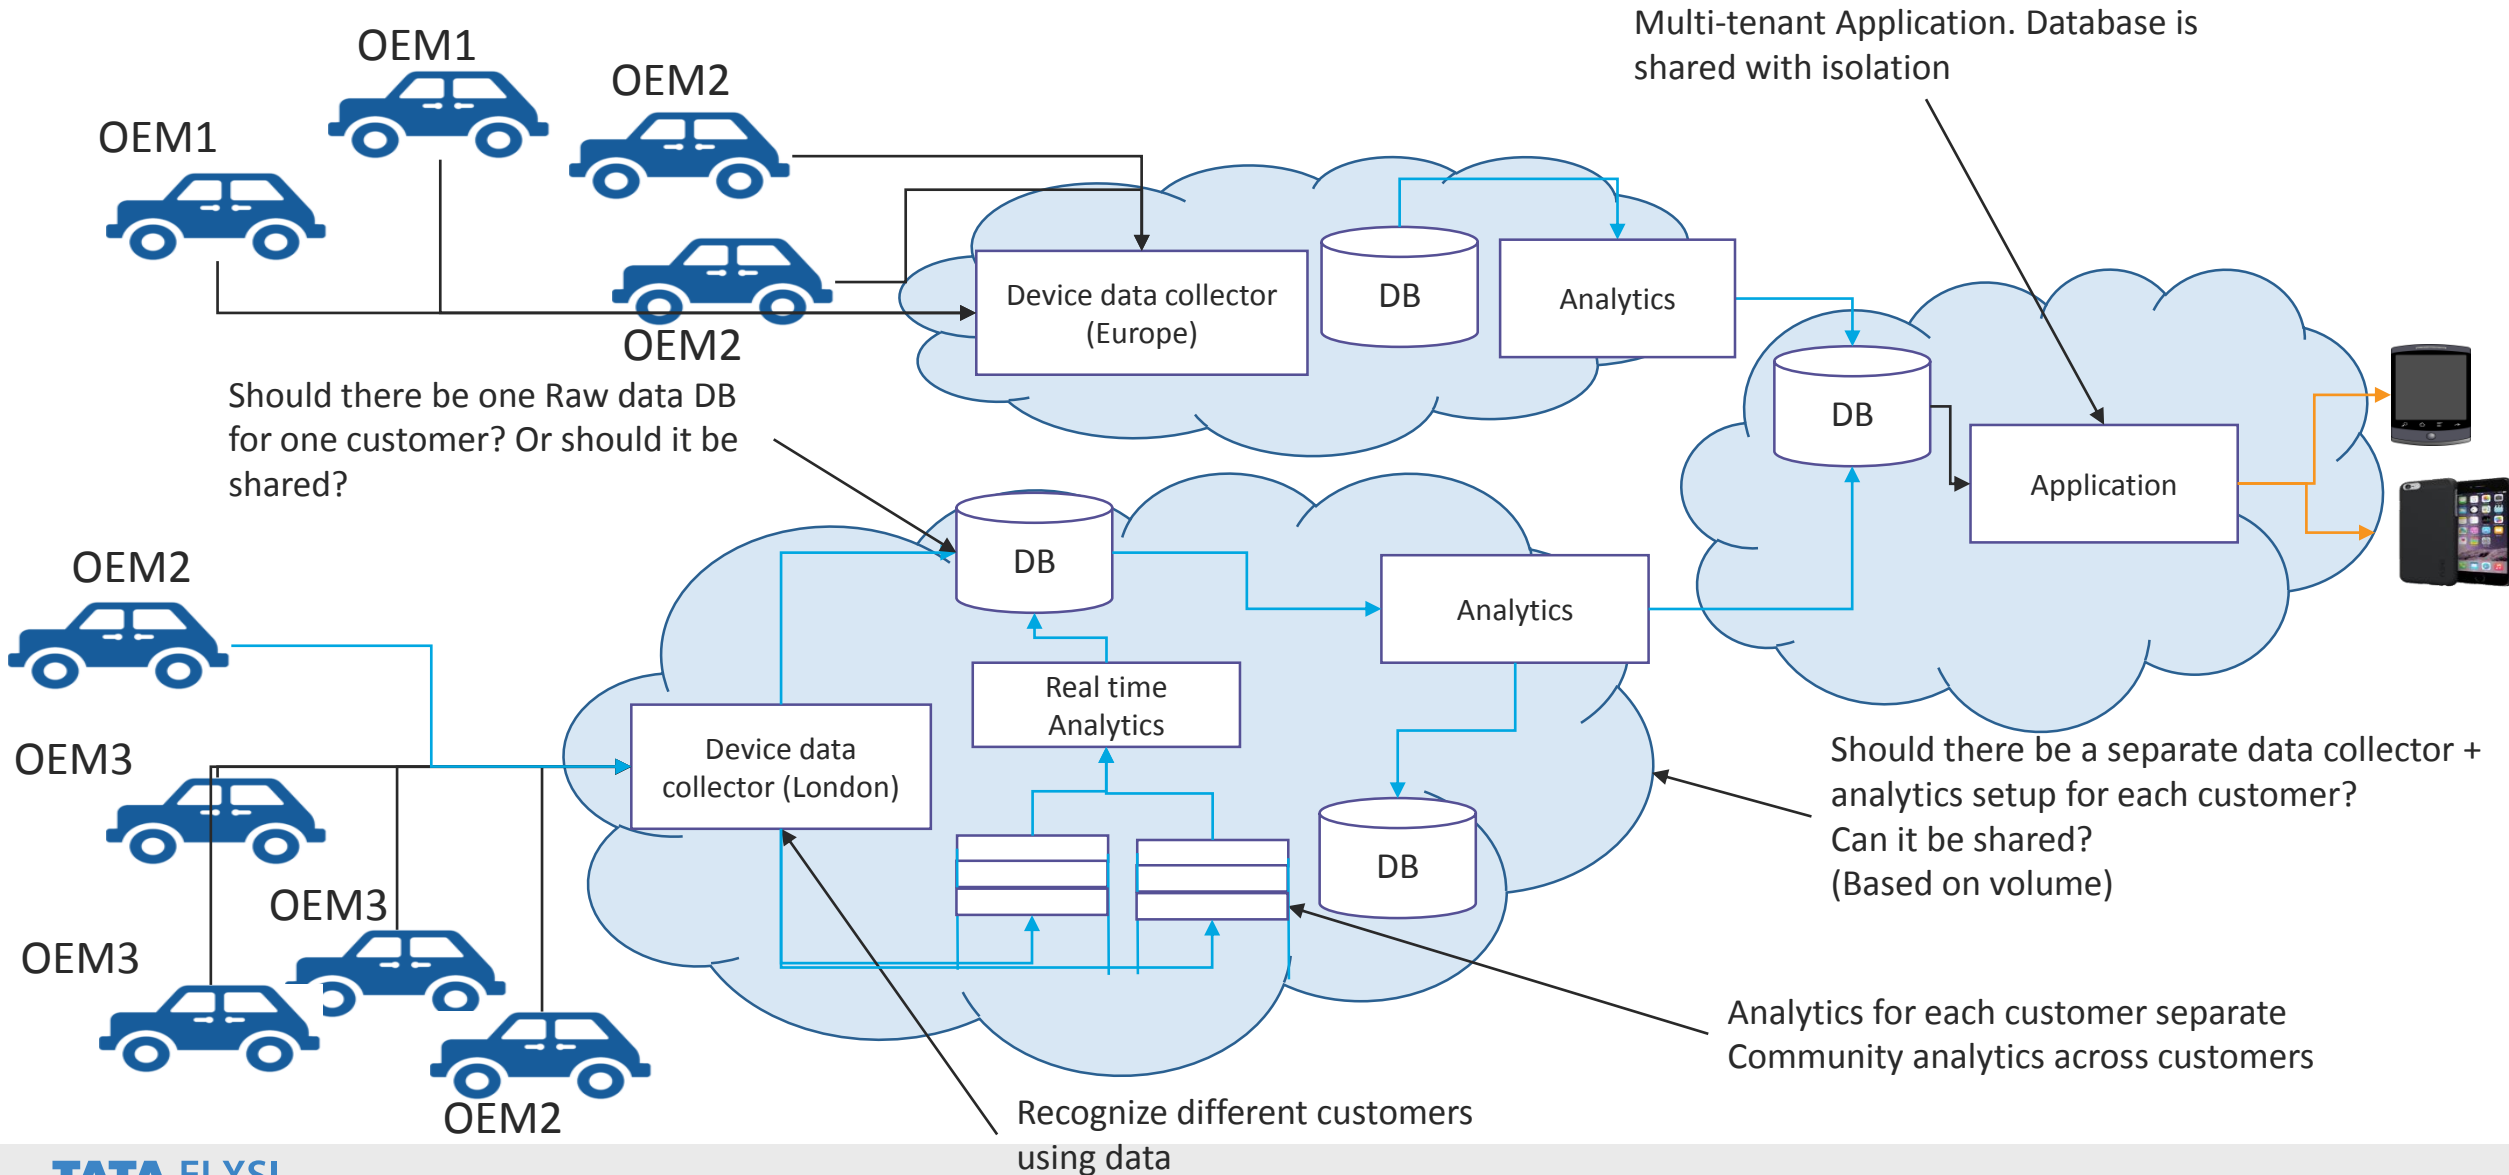

Data Reliability

- Will the sensor give back the same data point given
 - Under the same set of environmental conditions?
 - Impact of noise on the sensor
- How dependable are the data point collected?
 - Can it directly be used to provide application features?
 - E.g., Single data point temperature collected is 29.5C
 - Comfortable temperature set at 30C
 - Should the AC be turned on or off?
 - e.g., Latitude/Longitude collected is 12.967816 / 77.510983
 - Is it same as 12.967241, 77.511101?
 - Need a nearby function and not direct comparison?

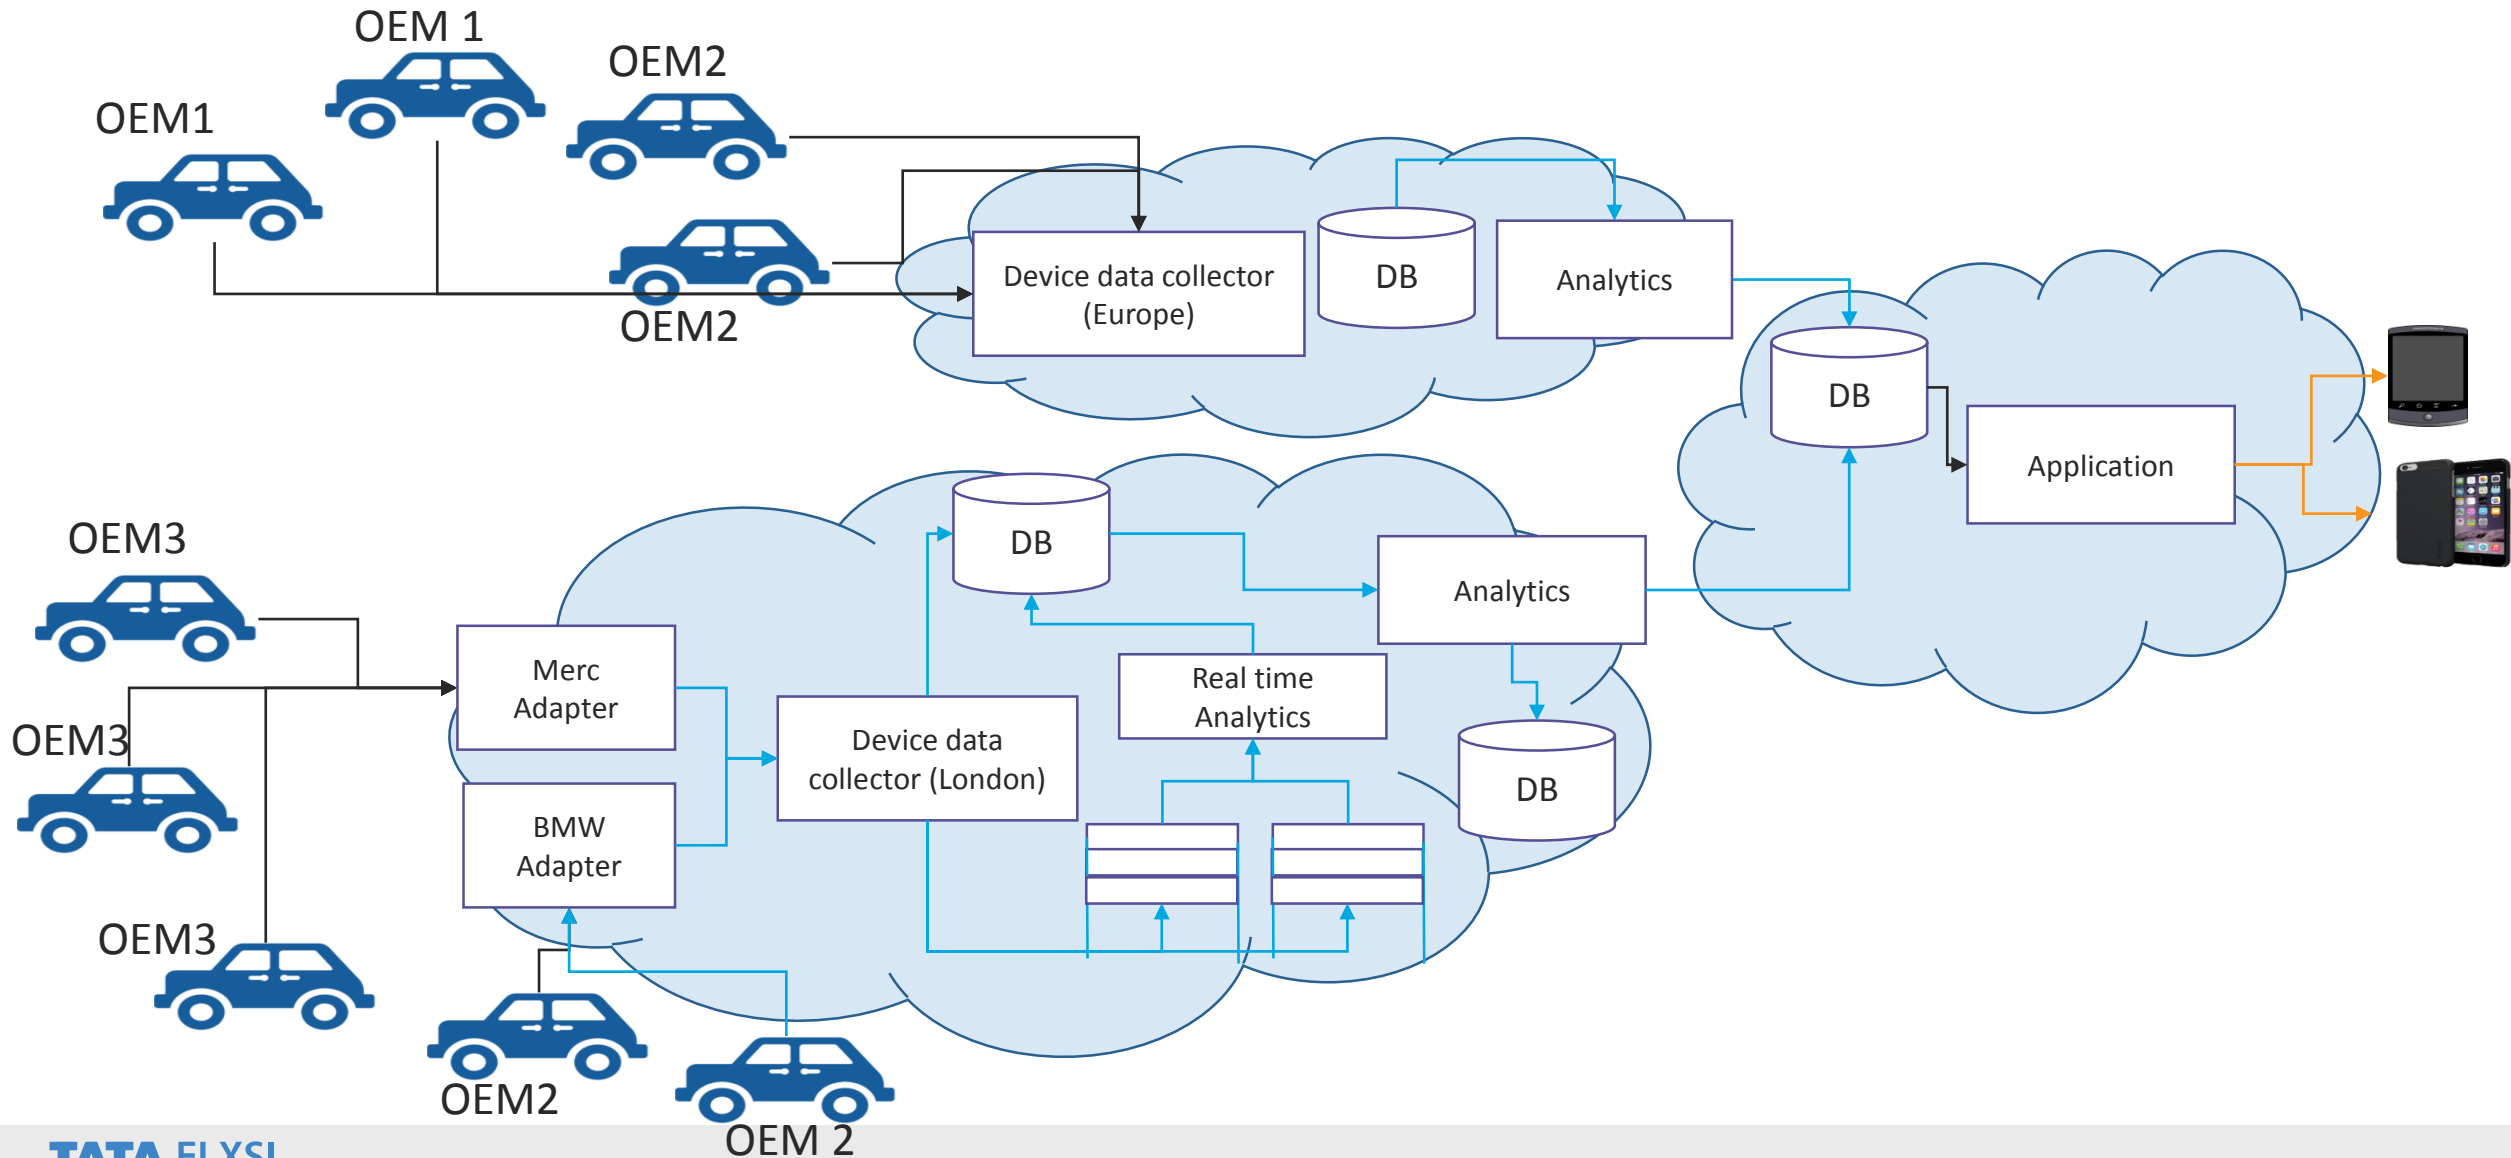

Data Types and Data Integrity

- Impact of Customization
 - Different devices provide the same data
 - Data formats are different from different devices
 - Data from all these devices have to be mapped to a common schema
 - Different customers require different features
 - Data collected depends on features
 - Data co-relation and analytics depends on features
 - Have to be customizable what data can and need not be collected

Data Analytics

Impact of customization on the Architecture

Scaling – Simple problem, tricky to solve

- Simple problem definition
 - As the number of devices/cars increase, the architecture should **scale up** to take the load
- Tricky to solve
 - Invest just enough for the current load, but architect to expand easily
- Standards ??
- Compliance Obligations?

And some non technical challenges

- Who is the owner of the valuable vehicle/consumer data?
- Who will the customer trust
- Who will use my data
- Who should be allowed to use my data
- Privacy

And many more.....

The “digital” car : Here to Stay !!

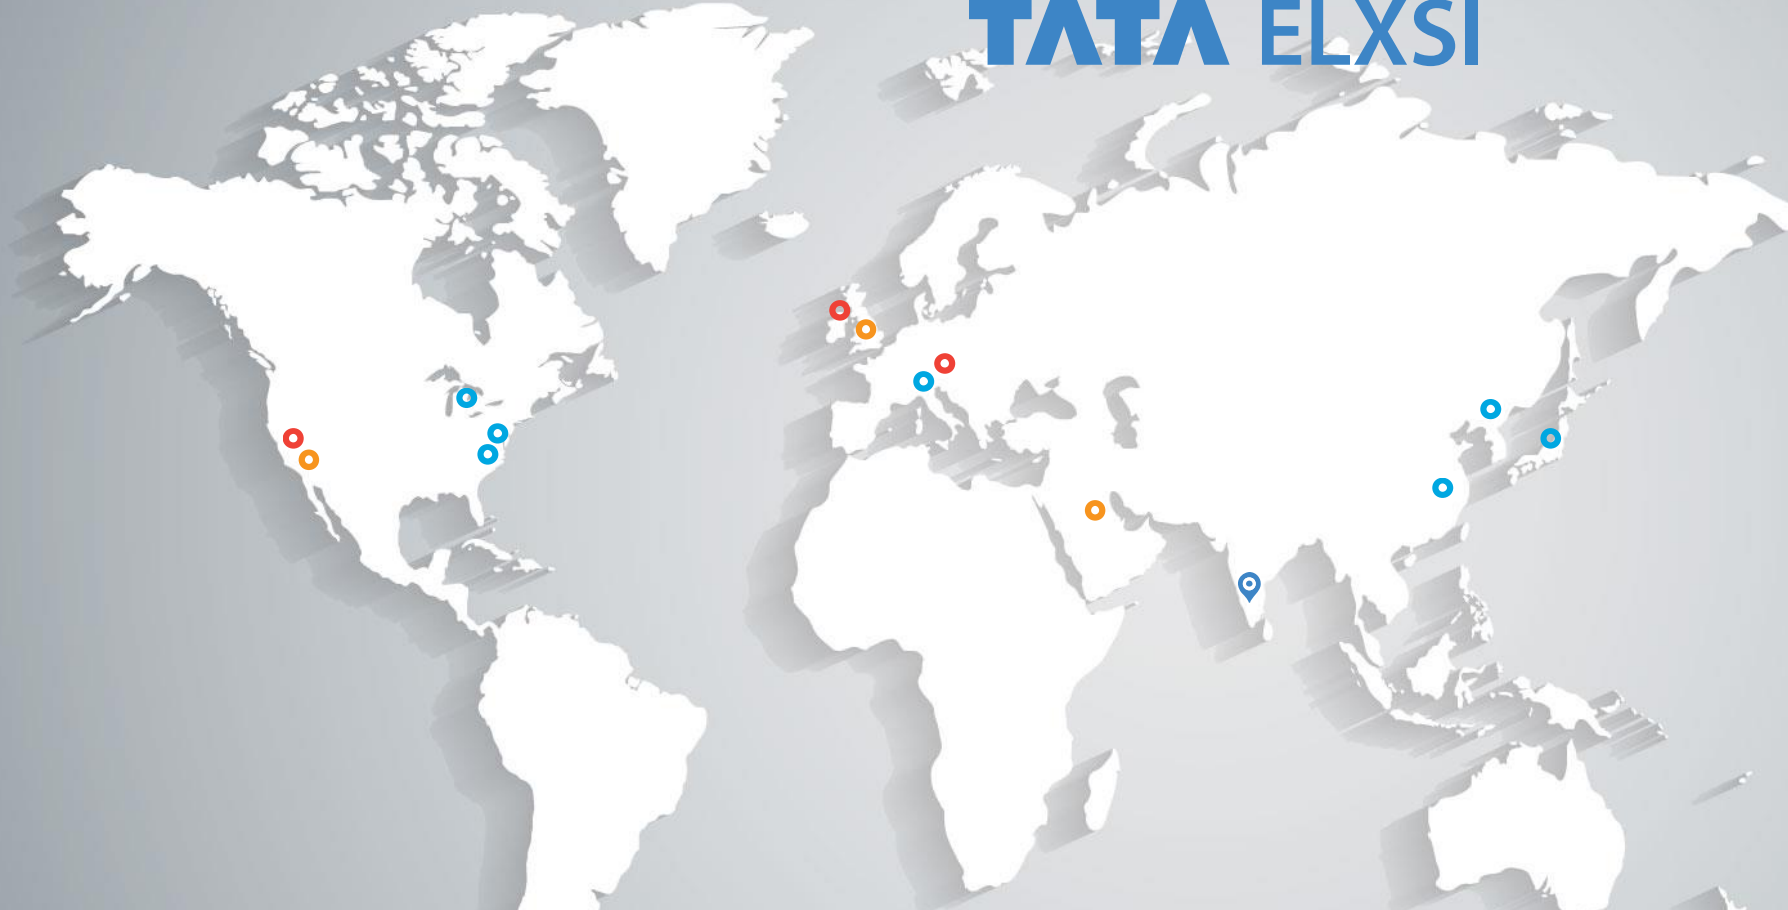

Fighter planes	:	20 M lines of code
High end cars	:	100 M lines of code
Electronics SW	:	< 20% of car cost in 2005
Electronics SW	:	Almost 40% today
Innovation Spend	:	90% in Electronic Systems
Spend on innovation	:	US\$ 105 B in 2014, 4% of revenue
SOC market	:	USD 31B, 7.5% growth

Huge, Mass of Unoptimized Lines of Code, Heterogeneous Architectures, Scalability, Reliability, Interoperability are challenges to managed simultaneously with increasing complexity of features and functionalities.

Thank You
